Plano Dentist Warns the 3-3-3 Rule Will Not Cure Tooth Infection

November 24, 2026

November 24, 2026 -
A viral pain-relief shortcut circulating on social media is prompting some patients to wait out dental infections that need same-day treatment, according to Vitality Dental, a boutique emergency dentist practice on Coit Road in Plano, Texas.

Interest in the so-called "3-3-3 rule for tooth infection" has climbed across dental blogs, short-form video and search results over the past year. The informal rule describes a short course of over-the-counter ibuprofen, taken three times a day for no more than three days, as a way to control toothache pain at home. Practice leaders say the guidance is increasingly being read as a treatment plan rather than a stopgap, particularly among commuters along US-75 and the Dallas North Tollway who postpone care until the weekend.

Andrew Kung, DDS, FAGD, FICOI, founder and lead dentist at Vitality Dental, said the practice approaches acute dental pain by treating its source rather than silencing the signal. An anti-inflammatory can quiet a toothache for a day or two, Kung said, but it does not reach the bacteria that caused it.

The rule loosely echoes evidence-based guidance, which is part of why it travels so well. A clinical practice

guideline published in February 2024 in The Journal of the American Dental Association identifies nonsteroidal anti-inflammatory drugs, alone or combined with acetaminophen, as first-line therapy for the temporary management of toothache when definitive dental treatment is not immediately available. Researchers summarizing that guideline noted someone in the United States visits a hospital emergency department for a dental condition roughly every 15 seconds, and those visits rarely deliver definitive treatment. The operative word, Kung said, is temporary. A periapical abscess is a bacterial infection at the root of the tooth, and an anti-inflammatory does not resolve it. Left untreated, that infection can spread from the root into the jaw and the surrounding facial spaces.

The three-day window carries a second risk that patients rarely consider. Someone who feels better on day two may assume the problem has passed, when the pain has simply been masked while the underlying infection continues. Ibuprofen is also not appropriate for every adult, including patients managing stomach ulcers, kidney conditions or certain cardiovascular conditions, which is why the practice encourages a phone call before any self-directed regimen.

Certain symptoms move a toothache out of the pain-management category entirely. Fever, swelling that spreads toward the eye or under the jaw, and any difficulty swallowing warrant same-day evaluation rather than another dose. The practice reserves openings in the daily schedule for cases flagged during phone triage.

Vitality Dental treats acute pain as a diagnostic question first. The practice uses 3D cone beam imaging, intraoral cameras and digital X-rays to distinguish reversible pulpitis, which a filling may address, from irreversible pulpitis or an abscess that calls for root canal therapy or extraction. The office opens at 7 a.m. on weekdays, ahead of the Coit Road and US-75 commute. Kung, a Plano native and Plano Senior High graduate, has served the community for nearly a decade, and the practice holds more than 1,000 Google reviews.

Residents of Plano, Frisco, Richardson and North Dallas experiencing persistent throbbing tooth pain, gumline swelling or a suspected dental abscess can review emergency triage guidance and request a same-day appointment with Dr. Kung and the Vitality Dental team at https://vitalitydentaldfw.com/services/emergency-dentist/.
