All Pro CS Decks Expands Porch Design and Installation Services

October 22, 2026

COLLEGE STATION, TX - October 22, 2026 -
All Pro CS Decks has broadened its porch design and installation services for homeowners across the Brazos Valley, giving residents of College Station, Bryan, and neighboring communities additional options for covered outdoor living space. The expanded offering covers custom porch layouts, structural construction, and finish work handled by the company's licensed and insured crews.

The move responds to sustained demand for functional outdoor living areas in a region where mild weather supports outdoor use for much of the year. Porches extend usable square footage beyond the walls of a home and provide shaded transition space between interior rooms and the yard, a feature that many households in Central Texas rely on through long spring, summer, and autumn seasons.

Under the expanded scope, All Pro CS Decks pairs design consultation with construction so that a single team carries a project from concept through completion. The process begins with an assessment of the site, the existing structure, and the homeowner's intended use, followed by a design that accounts for local building codes and permitting requirements. Material selection spans traditional wood as well as composite and synthetic decking systems chosen to hold up under heat and humidity.

The expanded service encompasses several porch configurations, including open porches, screened enclosures that limit insects and debris, and covered structures tied into existing decks or patios. Each configuration carries different requirements for framing, drainage, and roof attachment, and the company evaluates those factors against the layout of the home before a design is finalized.

The porch work joins the company's established range of outdoor construction, which includes decks, patios, pergolas, shade structures, and three-season rooms. By adding depth to its porch practice, the firm aims to serve homeowners who want a covered structure matched to the architecture of the house rather than a standardized add-on.

"The expansion lets homeowners plan a porch and see it built by the same team from the first sketch to the final board," said Hector Garcia, owner of All Pro CS Decks. "The goal is a structure that fits the house, meets code, and holds up to the Brazos Valley climate for years."

Garcia noted that column detailing, railing systems, roofing, and flooring are addressed together during design so that structural and aesthetic decisions align before construction begins. He added that coordinating those elements early helps limit change orders and keeps projects on schedule.

Material choices influence long-term maintenance, a consideration the company reviews with homeowners during planning. Pressure-treated lumber, composite boards, and synthetic decking each differ in cost, upkeep, and resistance to moisture and sun, and the selection is matched to the exposure of the porch and the budget of the project.

The company structures each engagement so that design revisions occur before materials are ordered, an approach intended to reduce waste and keep the build aligned with the approved plan. Homeowners receive drawings and a scope of work that define dimensions, materials, and finish details ahead of construction.

All Pro CS Decks has built decks, porches, and related outdoor structures in College Station and Bryan for more than a decade, and its service area reaches surrounding towns including Brenham, Navasota, and Caldwell. The company holds the licensing and insurance required for residential construction in the communities it serves, and it coordinates permitting with local authorities as part of each build.

Industry observers have tracked steady homeowner interest in outdoor living investments, which are frequently cited among home improvements that add usable space and support resale value. Covered porches in particular allow outdoor use during rain and peak sun, extending the practical season for a feature that might otherwise sit idle during harsher weather.

The expanded porch service is available now to homeowners within the company's Brazos Valley coverage area. Prospective clients can request an assessment and a written estimate before committing to a design, and scheduling is arranged directly with the company.
