All Pro CS Decks Expands Deck Repair and Restoration Services

October 29, 2026

COLLEGE STATION, TX - October 29, 2026 -
All Pro CS Decks, a residential deck construction and repair company serving College Station, Texas, and the surrounding Brazos Valley, has expanded its deck repair and restoration services to cover structural repair, board replacement, refinishing, and railing reinforcement for homeowners with aging or storm-damaged decks. The expansion adds new inspection and rebuilding capabilities to the company's existing construction work, effective immediately for residential customers in the region.

The expanded deck restoration line addresses damage that develops gradually from sun exposure, humidity, and seasonal temperature swings common to Central Texas, conditions that loosen fasteners, warp boards, and break down sealants over time. Untreated wood decks in the region can develop surface cracking within a few years, and structural components such as ledger boards, joists, and support posts are prone to moisture damage when flashing or drainage is inadequate. Company representatives said the additional capabilities allow crews to evaluate and address both structural and cosmetic issues during a single site visit, rather than referring homeowners to separate specialists for different categories of repair. The change is intended to shorten the time between an initial inspection and completion of a project.

Deck repair projects handled through the expanded division range from replacing a limited number of weathered boards to reinforcing support posts, releveling frames, and rebuilding stairs and railings to meet current safety expectations. All Pro CS Decks said the broader service offering was developed after receiving a rising number of inquiries from owners of decks built more than a decade ago that are now showing rot, insect damage, or structural movement. In some cases, a deck that appears sound on the surface can have a compromised frame underneath, a distinction the company said is often missed in visual-only assessments before a listing or resale. Addressing that gap was part of the reasoning for adding a formal restoration service rather than treating repairs as one-off jobs.

"Restoring a deck rather than replacing it preserves usable materials and lowers overall cost for property owners, but it requires a full inspection of the structure, not just the surface," said Hector Garcia, owner of All Pro CS Decks. Garcia said crews are trained to check for hidden issues, including compromised ledger boards, deteriorated footings, and moisture damage beneath the decking, before beginning any cosmetic work. According to Garcia, homeowners frequently request cosmetic staining or board replacement without realizing the underlying frame needs attention first, which is why the expanded service now begins with a documented structural inspection.

The expanded repair and restoration division serves single-family homes and rental properties throughout College Station, Bryan, and nearby Brazos Valley communities. Services now include composite and wood re-decking, structural leveling, handrail and baluster repair, deck cleaning, and application of water-repellent sealants suited to the region's climate. Property managers and landlords are also included among the customers the division is intended to serve, since rental properties often defer maintenance until a deck fails an inspection or a tenant reports damage. All Pro CS Decks said estimates for repair and restoration projects are provided after an on-site assessment rather than over the phone.

Garcia said the company is introducing a standard inspection checklist so homeowners can document early signs of deck deterioration before scheduling a repair estimate, including soft spots in decking boards, rust on fasteners, and gaps where a deck attaches to a house. Most projects handled under the expanded service line are completed within a few days, according to the company, depending on the extent of structural work required. Larger restoration projects that involve reframing or footing repair can take longer and may require a permit, depending on the scope of work and local building requirements. All Pro CS Decks said it coordinates permitting where applicable as part of the expanded service.
