822 Heat and Air Expands Heating and Air Conditioning Services Across Greater DFW Metroplex

September 10, 2026

Benbrook, TX - September 10, 2026 -
822 Heat and Air, a commercial and residential HVAC contractor based in Burleson, Texas, has expanded its heating and air conditioning services to reach additional communities throughout the Greater DFW Metroplex. The expansion extends the company's coverage to homeowners and businesses in Crowley, Benbrook, Grand Prairie, Irving, Weatherford, Granbury, Midlothian, Duncanville, Mansfield, and Fort Worth.

The expanded service footprint arrives as regional demand for reliable HVAC support continues to grow ahead of the Texas cooling season. The company specializes in complete HVAC installation for both large-scale commercial projects and residential properties, along with routine checks, targeted repairs, and full system replacements.

822 Heat and Air noted that many system failures can be traced to warning signs that go unaddressed. Uneven cooling, unusual noise, and rising electricity bills often signal a struggling air conditioning system that may lead to a full breakdown if left unchecked. The company's licensed technicians handle a range of issues,

including refrigerant leaks, electrical component faults, compressor problems, and airflow concerns.

"Expanding into more communities across the Metroplex means area residents and business owners have access to trained, licensed technicians who know how to get any HVAC system running smoothly," said David, owner of 822 Heat and Air. "The goal has always been to keep homes and commercial spaces comfortable through every season, and reaching these additional service areas allows the team to do exactly that."

The company's offerings span four core areas: commercial HVAC, residential HVAC, ductwork, and AC tune-up service. Commercial HVAC work addresses the heating, cooling, and ventilation needs of larger buildings through installation, repair, and maintenance. Residential HVAC service covers new system installation, repairs to existing units, and indoor air quality improvements. Ductwork services focus on the installation, repair, and maintenance of the systems that distribute air throughout a structure, while AC tune-up service centers on regular maintenance intended to prevent breakdowns and extend equipment lifespan.

Seasonal maintenance and tune-ups form a significant part of the company's expanded reach. Regular inspections allow technicians to identify small problems before they escalate, a factor that becomes especially relevant as summer temperatures rise across North Texas.

"Preventive maintenance often makes the difference between a minor adjustment and a major repair," David added. "With the expanded coverage, more customers can schedule seasonal checks and address concerns early rather than waiting for a system to fail during peak heat."

822 Heat and Air also offers financing options subject to credit approval and offer eligibility. The company clarified that financing terms are arranged directly between the customer and the chosen finance company, and that 822 Heat and Air is neither a broker nor a lender and does not assist with, counsel, or negotiate financing.

822 Heat and Air is a professional HVAC company serving commercial and residential clients throughout Burleson, Crowley, Benbrook, Granbury, Joshua, Godley, Cleburne, Alvarado, Fort Worth, Arlington, Dallas, and the surrounding DFW communities. The company employs professionally trained and licensed technicians and focuses on keeping client properties comfortable and energy-efficient throughout the year.
