Northwest Plumbing, Heating & AC Highlights Furnace Repair and Central Air Inspection Ahead of Cold Season

September 15, 2026

DAVENPORT, Iowa - September 15, 2026 -
As temperatures drop across the Quad Cities, Northwest Plumbing, Heating & AC is directing attention toward furnace repair and installation services designed to keep area homes warm through the winter months. The locally owned company, which has served the region since 1923, reports that the transition from cooling to heating season is one of the most important times for homeowners to address the condition of their equipment.

With more than a century of operation in the community, the company points to the fall and early winter period as the season when heating system failures become most common. A central air inspection performed before the coldest weeks can identify worn components and efficiency concerns before a system is placed under sustained demand. The team at Northwest Plumbing Heating & AC provides furnace repair, installation, and annual heating system checks, along with services for boilers, mini-splits, geothermal systems, and high-efficiency heating and cooling equipment.

"Cold weather has a way of revealing problems that were easy to overlook during the warmer months," said Bill Durand of Northwest Plumbing, Heating & AC. "Scheduling a heating system check before the first hard freeze gives homeowners the chance to address small issues on their own timeline, rather than waiting for a breakdown on the coldest night of the year."

The company also continues to provide plumbing services throughout the year, noting that colder temperatures often bring their own set of concerns for household water systems. Frozen and burst pipes, sump pump failures, and water heater issues tend to increase during winter, and the company offers repair and installation work in each of these areas. Additional plumbing services include drain cleaning, sewer repair, camera inspection, leak repair, and water heater replacement, all available through the same team of technicians.

Northwest Plumbing, Heating & AC has structured its offerings to cover installation, repair, and ongoing service across heating, cooling, and plumbing. The company maintains preventative maintenance programs that include annual system checks, and it offers financing options for larger projects such as furnace and system replacements. Homeowners considering seasonal work can review current offerings, including the company's Deal of the Month, through its resources page.

Details about heating and furnace work, as well as information on the company's plumbing services can be found on the company's website. This news article outlines seasonal considerations that the company believes are relevant to homeowners preparing their properties for winter.

"After serving this community for a hundred years, the team understands what local winters demand from a home," Durand added. "The focus this season is on preparation, so families are not left without heat when they need it most."

Northwest Plumbing, Heating & AC is a locally owned company based in the Quad Cities area. Founded in 1923, the company provides residential plumbing, heating, and air conditioning services, including installation, repair, and preventative maintenance. Its team of technicians works with a wide range of heating and cooling systems, and the company offers financing options and seasonal maintenance programs for area homeowners.
