Seacoast Pool & Spa Opens 2027 In-Ground Pool Scheduling

September 17, 2026

DOVER, NH - September 17, 2026 -
Seacoast Pool and Spa has opened scheduling for 2027 in-ground pool installations across Southern New Hampshire and Southern Maine. The owner-operated pool contractor is accepting project reservations for the 2027 build season, which runs from late spring through early fall.

The company builds custom vinyl liner in-ground pools using a 10-step construction process that runs from the first on-site meeting through the final walkthrough. Seacoast Pool & Spa serves residential customers throughout the region with custom pool design and installation services tailored to each property's specific layout and customer preferences.

Homeowners who reserve a 2027 slot begin with an on-site meeting to finalize pool size, shape, and location. They complete that design work, along with equipment selection, during the off-season so construction can begin once ground conditions allow.

"Opening the 2027 schedule now gives families time to settle the design before the build season starts," said Noah, owner of Seacoast Pool and Spa. "Every project gets direct oversight from the first site meeting through the final walkthrough, and scheduling in advance is what makes that possible."

Those decisions cover more than dimensions. Vinyl liner construction uses aluminum walls, allowing rectangles, kidney shapes, L-shapes, and forms drawn to fit an individual yard, plus built-in steps and benches placed where a family wants them. Liners are available in a range of patterns. Attached spas can be built into the same structure, sharing heating and filtration with the pool while running on separate temperature controls.

The construction sequence is built around New England conditions. The build sequence begins with excavation, followed by placing aluminum walls and stairs set with a laser level. The team pours a concrete

collar and pool bottom, installs plumbing and equipment, and backfills and grades the site for patio work. The team applies a vermiculite base, fits the vinyl liner using a vacuum system, then fills the pool with a water truck. The final walkthrough covers pool care and equipment operation and includes a question-and-answer session and delivery of accessories.

Frost depth and soil conditions in the region shape how the company approaches excavation and wall placement. The company chooses equipment on the same basis. Rather than installing a standard package, the company specifies plumbing configurations, heating, filtration, and safety covers based on the region's winter and spring conditions. Seacoast Pool and Spa is licensed and insured in both New Hampshire and Maine and builds to the codes that apply in each municipality it works in.

One person oversees each build from the first site meeting to the final walkthrough, so scheduling decisions and construction decisions come from the same source.

"Custom shapes, step placement, and any attached spa all get decided before ground opens," Noah added. "Settling that in the off-season is what keeps the build itself on schedule."

Other work continues on a shorter cycle. Concrete pool decks are poured alongside installations in broom, stamped, colored, and exposed aggregate finishes, and are built to withstand regional winters.

The company works from locations in Dover, New Hampshire, and Berwick, Maine. It operates Monday through Saturday from 7:00 a.m. to 5:00 p.m. Free, no-obligation quotes are available for in-ground pool projects. Visit the website to learn more about in-ground pools.

About Seacoast Pool & Spa

Seacoast Pool and Spa is an owner-operated pool construction company established in 2024 and based in Dover, New Hampshire. The company builds custom vinyl liner in-ground pools, installs hot tubs, and pours concrete pool decks for residential customers throughout Southern New Hampshire and Southern Maine. It is licensed and insured in both states.
