

High Tech Plastics Introduces A New Way To Buy Cut Plastic Pieces

April 28, 2015

April 28, 2015 - PRESSADVANTAGE -

Since 2008, High Tech Plastics has focused on innovation in the plastics industry. Originally starting as a plastic remnant distributor, High Tech Plastics has grown from only supplying remnant plastic inventory to supplier of full sheet and rod inventory as well. They stock large quantities of over 15 different types plastic material such as Nylon, PTFE, Delrin/Acetal, HDPE, and more. Both full size sheet and rod materials are also available. Although High Tech Plastics is located in Southern California, they ship all over the country to all 50 states.

Innovation has been the key to High Tech Plastic's success. The focus on providing a much needed service for the plastics industry has flowered into company growth and success. Specializing in plastic remnants, or off-cuts, is its success story. Spokeswoman Penny Plastics, as she likes to call herself, said, "By focusing on providing pre-cut plastic pieces (remnants), I can reduce overall lead time, reduce cost significantly, and save our self and the customer labor costs as well."

High Tech Plastics offers almost its entire inventory online. It is Penny's belief that ease of access to materials, inventory, and plastic information are vital parts of the buying process. To her, the most important part of the buying process is an informed customer. It can be difficult, and sometimes frustrating to select the right plastic for your needs. High Tech Plastics conquers this problem by providing important information about the materials on their plastic material pages. If you cannot find the information that you need, she offers multiple ways of contact, from a messenger on the bottom right of the page, to her personal email address.

Penny encourages her customers to contact her directly about any questions they might have about any product. Besides remnants, High Tech Plastics also offers a full range of cut to size plastic pieces. This is yet another reason why open lines of communication from the buyer are crucial. She states, "I want to make sure I fully understand the application, dimensions, and requirements of a custom cut piece of plastic sheet before I send a quote. Misquoting can lead to wasted time and frustration, of which neither party wants." High Tech Plastics offers a wide variety of plastic sheet and rod materials, including: ABS, Acetal, Delrin, HDPE, Nylon, PETG, PEEK, PTFE, Ultem, Vivak and many more.

To High Tech Plastics, providing as many different shapes and sizes of cut plastic pieces as they can is the goal. The more inventory to choose from, the better the chance that the customer will find what he/she is looking for.
