Immortalitea Company Announces Modeling Of Genome Sequence Of Gynostemma Pentaphyllum

December 20, 2016

December 20, 2016 -
It has recently been announced that scientists have succeeded in modeling the entire genome sequence for the Chinese medicinal herb Gynostemma pentaphyllum. Grandville, MI business, The Immortalitea Company, has welcomed this news, as it places scientific credence to the health benefits of their tea products. Their own Gynostemma tea, which is grown in Thailand, is one of their most popular products.

The Immortalitea Company's Ralph Kenney says: "We are a company with a mission to improve the world on a range of different levels. First of all, we want to create a network of small, organic tea growers, and pay them a fair price for their products. In so doing, we aim to make the planet a better place by reducing the usage of pesticides and other toxic chemicals. The fact that this is necessary for the future of our planet has long been scientifically proven. But our goal is also to make sure that people can enjoy great tasting, ethical tea, and experience health benefits from it. This is why the latest study into Gynostemma has been so important to us."

That the tea products offered by Immortalitea have benefited people has been well known for some time now. In fact, the company has recently announced their highest sales figures to date, with a 50% year on year

increase, which is a testament to the effectiveness and quality of their products. The company has also received a wealth of positive reviews to attest to this. "The Jiaogulan tea is one of the best investments you can make for yourself," says Matthew R. on the company's Facebook page. "It really helps to boost all of your body's different systems and processes & helps to alleviate stress. Tastes just like green tea but without the caffeine & is chemical-free. Can't imagine life without it now."

The company's Jiaogulan product is one of their most popular items. Many people have noticed significant health benefits through it, so much so in fact that a number of physicians now offer it in their waiting rooms. The Immortalitea Company welcomes any new scientific information, such as the recent genome sequencing of Gynostemma, to further lend credence to their offerings.
