Comfort Professor Serves as Mass Save Heat Pump Contractor Ahead of 2026 Rebate Deadline

November 18, 2026

WILMINGTON, MA - November 18, 2026 -
Comfort Professor, a heating and cooling company based in Wilmington, Massachusetts, is helping homeowners across the Greater Boston area install qualifying heat pump systems before the December 31, 2026 installation deadline for current Mass Save incentives. As a participating contractor in the Mass Save Heat Pump Installer Network, the company guides homeowners through system selection and the incentive process.

The announcement arrives as Massachusetts residents weigh decisions about energy-efficient heating and cooling upgrades. Installations completed by the end of 2026 may qualify for higher rebate amounts than those scheduled to take effect in 2027, when whole-home rebate figures are set to decrease. The timeline has prompted renewed attention among homeowners evaluating air source heat pump options.

Comfort Professor works with several categories of heat pump technology, including ducted heat pumps, ductless mini-split systems, and air-to-water heat pump systems. This range allows the company to address

homes with existing ductwork as well as those without, matching equipment to the layout and heating needs of each property. The company operates with an education-first approach, explaining the situation, reviewing available options, and helping homeowners understand a recommended solution before work begins.

A central element of the current program involves Mass Save Heat Pump Rebates, which provide financial incentives tied to the role a heat pump plays in a home's heating system. Whole-home installations currently qualify for up to $8,500, while income-eligible households may access enhanced incentives of up to $16,000. These figures reflect the structure of the Mass Save program for qualifying 2026 installations.

"With the December 31 deadline approaching, homeowners considering heat pump installations should understand the timeline for qualifying under the 2026 Mass Save structure," said Bobby Skinner, Sales Manager at Comfort Professor. "The company works with ducted, ductless, and air-to-water heat pump systems, which gives homeowners the ability to select a solution suited to the specific needs of their home rather than a single standard option."

Skinner added that the enhanced incentives can meaningfully change the planning process for some households. "Income-qualified Massachusetts homeowners may be eligible for enhanced Mass Save incentives of up to $16,000, which makes heat pump installations more accessible for families who might otherwise postpone the project," he said.

An accompanying video produced by the Ductless Directory channel provides additional background about Comfort Professor and its heat pump installation services. The video outlines the company's work as a ductless HVAC contractor serving Wilmington and surrounding Massachusetts communities.

Comfort Professor is a home comfort company serving the Greater Boston area, the North Shore, MetroWest, and neighboring Massachusetts communities, including Boston, Cambridge, Newton, Somerville, Brookline, and Medford. The company provides heating and cooling services such as furnaces, boilers, heat pumps, air conditioning, ductless mini-split systems, ductwork, indoor air quality services, and system tune-ups. Additional service areas include plumbing, water filtration, and generators. As an Elite Mitsubishi Electric Diamond Contractor and a Mass Save-approved installer, Comfort Professor focuses on helping homeowners understand and access available energy efficiency programs.
