

STEVENS Sitework and Excavation Company Cautions Against Neglecting The Importance of Sitework

January 23, 2021

Middleburg Heights, Ohio - January 23, 2021 -
Ohio-based STEVENS Engineers and Constructors explains the importance of sitework to a construction project in its latest article. Neglecting the sitework is a mistake some construction companies make, states the Ohio industrial construction company, emphasizing its importance on commercial and industrial projects.

Sitework and excavation are essential to preparing a site for the construction job. The article explains the diversity of sitework from one project to another, depending on the construction project's needs and environmental conditions. The proper installation of septic tanks, filtration systems, and underground lines for gas, electricity, and sewer is important to reduce future problems.

The top industrial construction company focuses on erosion control and shoring to prevent the construction site from soil erosion, collapse, or weathering during the construction phase and make it safe for workers and equipment.

The article highlights why removing excess soil and rocks from the construction site is important while stressing the importance of a solid base to prevent long-term damage and liability suits.

Another important aspect of sitework highlighted by the Ohio construction company is preparing job site for driveways, sidewalks, and concrete pads and the importance of solid engineering underneath installed surfaces. The blog post emphasizes the need for clearing and grubbing for a clear site.
