

North Star Heating & Air Conditioning Introduces Winter Furnace Maintenance Guidance for Sandy Homeowners

November 16, 2026

SANDY, UT - November 16, 2026 -
As cooler temperatures settle across northern Utah, North Star Heating & Air Conditioning is encouraging Sandy homeowners to schedule furnace maintenance before relying heavily on their heating systems this winter. The family-owned HVAC contractor, in operation since 1998, is drawing attention to the transitional weeks ahead of the cold season as the ideal window for a professional heating evaluation.

The emphasis on seasonal preparation reflects a practical reality for many households. Furnaces often sit idle through the warmer months, and that period of inactivity can allow minor issues to develop unnoticed. By the time the first sustained cold snap arrives, worn components, restricted airflow, and overlooked maintenance gaps can affect how evenly and efficiently a home is heated. A preseason check helps address these concerns before the furnace becomes the primary source of warmth.

This latest North Star Heating & Air Conditioning winter heating guidance outlines several areas

homeowners may want evaluated as part of routine winter preparation. Among them are furnace performance and safe operation, the condition of ductwork that moves heated air through the home, and indoor air quality factors such as filtration and humidity. Addressing the furnace alone, the company notes, does not always resolve comfort problems if related systems are overlooked. Clean ducts and balanced humidity contribute to steadier warmth and healthier air throughout the colder months.

"A furnace that performed well last winter can still benefit from a seasonal evaluation, because small issues tend to surface after months of disuse," said Terry Kelsch, owner of North Star Heating & Air Conditioning. "Scheduling maintenance during the transitional weeks gives homeowners time to make informed decisions before the heating system is under heavy demand."

Seasonal maintenance fits into a broader approach to winter readiness that North Star Heating & Air Conditioning has emphasized throughout the region. Rather than waiting for a heating system to fail during peak demand, the company advocates for early assessments that give homeowners a clear picture of system condition. This proactive timing can reduce the likelihood of an inconvenient breakdown when temperatures are at their lowest.

"Honest assessments matter more than upsells," Kelsch added. "The goal is to help a household understand what its system needs and to communicate that clearly, without pressure."

The North Star Heating & Air Conditioning services in Sandy extend to furnace service and maintenance, heating repair, heat pump care, duct cleaning, and indoor air quality solutions including whole-home filtration and humidity systems. The company also maintains readiness for emergency heating situations as temperatures continue to drop through the season.

North Star Heating & Air Conditioning is a family-owned HVAC contractor based in Sandy, Utah, serving homeowners across Salt Lake County, Utah County, and surrounding communities including West Jordan, Lehi, Draper, Riverton, and Murray. With more than two decades of hands-on experience, the company focuses on heating, cooling, duct cleaning, and indoor air quality services for residential customers. The company is fully insured and certified, and it emphasizes quality workmanship, transparent communication, and reliable service in every season.
