

822 Heat and Air Expands HVAC Service and Installation Offerings for Homes and Businesses

November 23, 2026

Benbrook, TX - November 23, 2026 -
822 Heat and Air has expanded its residential and commercial heating and air conditioning offerings, providing complete HVAC installation and repair services across the Greater Dallas-Fort Worth Metroplex. The expansion addresses growing demand for full-scale system installation among both large commercial properties and residential homeowners throughout the region.

The company specializes in complete HVAC installation, serving customers from Cedar Hill and reaching communities including Crowley, Burleson, Benbrook, Granbury, Cleburne, Fort Worth, Arlington, and Dallas. Services span furnace and heating repair, air conditioning tune-ups, ductwork, and full system replacements for aging or inefficient equipment.

As a team of Cedar Hill hvac installers, 822 Heat and Air works with a range of heating systems, including gas and electric furnaces, heat pumps, and ductless mini-split units. Technicians are licensed, insured, and EPA-certified, and the company operates under license number TACLA65080C. Each installation begins with

an assessment to confirm the equipment is appropriately sized for the layout and airflow needs of the property.

The company has also outlined the factors homeowners weigh when considering replacement rather than repair. Systems older than fifteen years, frequent repair calls, rising energy bills, and safety concerns such as a cracked heat exchanger are among the common indicators. Transparency around furnace replacement cost remains a central part of the process, with the company providing upfront pricing and clear explanations before work begins.

Ductwork services form another component of the expanded offerings. The company provides inspection, sealing, repair, and flex duct replacement for homes experiencing uneven temperatures, elevated energy bills, or poor indoor air quality. When ductwork is too old or damaged to repair effectively, the team designs replacement systems tailored to the specific requirements of each property.

David, a representative of 822 Heat and Air, noted that the expanded services reflect the practical needs of property owners across the region. "Many homeowners and business owners are dealing with systems that were installed decades ago and no longer meet current efficiency standards," he said. "The goal is to give them a clear assessment, honest pricing, and an installation that fits the actual layout of the building rather than a one-size-fits-all approach."

David added that the company emphasizes education throughout the process. "A lot of the work involves helping people understand when a repair makes sense and when a replacement is the better long-term decision," he said. "There is no pressure to replace equipment that can be effectively repaired, and that approach has shaped how the company handles every project."

The company conducts safety-first inspections, including carbon monoxide and combustion checks, and backs its workmanship with a service guarantee. Financing options are available for replacements and new installations, subject to credit approval and offer eligibility.

822 Heat and Air is a professional heating, ventilation, and air conditioning company serving commercial and residential clients throughout Cedar Hill and the Greater DFW Metroplex. The company provides commercial and residential HVAC services, ductwork, furnace and heating services, and AC tune-up services, with a focus on energy efficiency, safety, and transparent pricing year-round.
