

822 Heat and Air Expands Heating and HVAC Repair Services Ahead of Texas Winter

November 24, 2026

Benbrook, TX - November 24, 2026 -
822 Heat and Air has expanded its residential and commercial heating and cooling offerings in advance of the colder Texas winter months, when demand for reliable furnace performance typically rises across the Greater DFW Metroplex.

The company, which serves Cleburne and surrounding communities including Crowley, Burleson, Benbrook, Granbury, Joshua, Godley, Alvarado, Fort Worth, Arlington, and Dallas, provides complete HVAC installation, maintenance, and repair for both large-scale commercial buildings and residential homes. The expanded seasonal focus covers gas and electric furnaces, heat pumps, and ductless mini-split systems.

As temperatures drop, heating systems that have remained idle through the warmer months often reveal problems such as failed igniters, blower motor failures, control board malfunctions, and gas valve issues. 822 Heat and Air addresses these concerns through residential furnace repair services that begin with a thorough inspection before any work is performed. Technicians are trained to diagnose and resolve issues accurately,

and each visit includes safety checks such as carbon monoxide and combustion testing.

Beyond individual repairs, the company offers broader residential hvac support that includes seasonal tune-ups, full system replacements, and new installations. Before installing a replacement unit, technicians perform load calculations to determine the appropriate system size and efficiency, accounting for factors such as insulation, window upgrades, and home additions. This approach is intended to match each system to the specific needs of the home or building.

For homeowners weighing whether to repair or replace an aging system, the company notes several common indicators, including units more than ten to fifteen years old, frequent or costly repairs, rising energy bills, and uneven temperatures throughout a property. In these situations, furnace replacement Cleburne services allow residents to upgrade to newer, more efficient equipment ahead of peak winter demand.

David, a service representative at 822 Heat and Air, explained the reasoning behind the seasonal expansion. "Many heating problems surface the first time a furnace runs after months of inactivity," David said. "Preparing for that in advance helps households and businesses avoid being left without heat during the coldest stretches of the season."

The company's technicians are certified, insured, and EPA-certified, and they service all major HVAC brands and system types. Workmanship is backed by a warranty, and financing options are available for replacements and installations, subject to credit approval. Seasonal maintenance plans that include scheduled tune-ups and priority service are also available.

David also addressed the company's approach to service. "Each job starts with a full inspection and a clear explanation of what the system needs," he said. "The goal is to diagnose the issue correctly the first time and present honest, upfront pricing before any work begins."

822 Heat and Air is a professional heating, ventilation, and air conditioning contractor providing commercial and residential services throughout the Greater DFW Metroplex and its suburbs. The company offers commercial HVAC, residential HVAC, ductwork, and AC tune-up services, with an emphasis on transparent pricing, safety, and energy-efficient solutions designed to keep homes and businesses comfortable throughout the year.
