

Sarkinen Industrial Pipelining Expands Hydro Jetting Drain Cleaning Capabilities Across Washington

November 24, 2026

VANCOUVER, WA - November 24, 2026 -
Sarkinen Industrial Pipelining has expanded its hydro jetting drain cleaning and Vac Truck Services to meet rising demand for trenchless maintenance across industrial and municipal sites in Washington and Oregon. The move responds to growing interest from municipalities, ports, and commercial property managers seeking no-dig solutions for storm, sewer, and wastewater systems.

The expansion reflects a broader industry shift toward trenchless technologies that minimize excavation, reduce surface disruption, and extend the service life of aging pipe infrastructure. Sarkinen Industrial Pipelining specializes in pipe repair, lining, jetting, and video inspection for pipe sizes ranging from three inches to thirty-six inches, serving a client base that includes government agencies, industrial and commercial properties, and homeowners associations.

Hydro Jetting Drain Cleaning uses high-powered water pressure to clear blockages, remove roots, and descale pipe interiors without the need for chemical treatments or excavation. The company pairs this

method with high-definition Closed Circuit Television inspections, allowing crews to assess pipeline conditions from manhole to manhole and identify cracks, blockages, and other damage before completing repairs.

Vac truck services form a core part of the maintenance program, using high-powered vacuum trucks to clean and maintain storm, sewer, and wastewater systems. These services support pipe cleaning, descaling, and root removal, and often work in tandem with the company's trenchless rehabilitation methods.

Alongside the expanded cleaning capabilities, Sarkinen Industrial Pipelining continues to offer cured-in-place piping, robotic pipeline cutting, and trenchless mainline repairs. The company has provided trenchless pipeline rehabilitation in Barberton, Washington, among other communities, applying UV and steam curing techniques to restore damaged pipes without open trenches.

"Expanding these cleaning and maintenance services allows crews to address pipeline issues earlier and with less disruption to the surrounding area," said a spokesperson for Sarkinen Industrial Pipelining. "Regular cleaning and inspection extend the life of pipe systems and help property owners avoid larger failures down the road."

The company noted that demand has grown as aging infrastructure requires more frequent assessment and maintenance. "Municipalities and industrial clients are increasingly looking for methods that keep systems operational while avoiding the cost and disruption of excavation," the spokesperson said. "Combining inspection, cleaning, and trenchless repair under one program addresses that need directly."

Sarkinen Industrial Pipelining is certified in advanced robotic systems for pipeline repair, LightRay technologies for pipe inversion and short-term repairs, and the cured-in-Place Pipelining rehabilitation method. The company complies with industry standards for pipeline assessment and holds safety certifications including OSHA, confined space safety, OSHA 10, and OSHA 30 training.

Serving communities throughout Washington, including Seattle, Tacoma, Spokane, and Vancouver, as well as the Portland Metro area, Willamette Valley, and Central, Eastern, and Southern Oregon, Sarkinen Industrial Pipelining provides pipe repair, lining, jetting, and video inspection services for a wide range of pipe sizes. The company offers on-site estimates and maintains service availability around the clock, including holidays and weekends.
