# Schwartz?s Greenhouse Launches Online Perennial Resource Hub for Southeast Michigan Gardeners

*November 23, 2026*

ROMULUS, MI - November 23, 2026 -
Schwartz?s Greenhouse has launched an expanded online resource hub designed to help Southeast Michigan gardeners select, plant, and maintain hardy greenery suited to their local climate. If you're wondering, "Where can I find perennial plants near me for sustainable, low-maintenance landscaping?" look no further!

Accessible through the Schwartz?s Greenhouse website, the hub compiles regionally tailored plant profiles, seasonal care guides, and soil management recommendations authored by the nursery's horticultural staff. Rather than offering general gardening advice, the database categorizes varieties by local hardiness zones, sun exposure, and soil types?helping homeowners match specific flora to heavy clay, sandy loam, or moisture-retaining yards.

The resource center highlights popular regional perennials carried at the 30705 Sibley Road nursery, including shade-tolerant hostas, drought-hardy daylilies, salvia, phlox, and native varieties that support local pollinators such as bees, butterflies, and hummingbirds. Detailed planting articles also address long-term landscape planning, outlining how deep-rooted perennials help prevent soil erosion, improve water infiltration, and reduce the need for annual spring replanting. Each plant profile also notes expected mature height, spread, and bloom windows so gardeners can plan continuous color from early spring through late autumn.

In addition to plant selection, the hub provides practical seasonal maintenance schedules covering spring cleanup, summer watering routines, deadheading techniques, and autumn winterization. By breaking care tasks down by month, the guides help local gardeners protect root systems against Michigan?s freeze-thaw cycles and prepare beds for reliable spring emergence.

According to internal observations at the Romulus-based nursery, regional demand has shifted steadily toward multi-season plants that return year after year, driven by environmentally conscious homeowners looking to build resilient outdoor spaces. The new online tool will come in handy when you find yourself asking, "Are there any perennial plants near me?" and want to understand which species will establish strong

root systems and thrive long-term in Michigan?s specific climate conditions.

Founded in 1939 by Henry Schwartz with a single greenhouse growing vegetables and bedding plants, Schwartz?s Greenhouse has operated in Romulus for over 85 years across four generations of family ownership. Today led by owners Chris and Josh Schwartz alongside a dedicated team of growers and perennial specialists, the nursery manages plant production directly from seedling propagation to retail floor care, ensuring crops are acclimated to southern Michigan?s seasonal shifts.

Operating across an extensive greenhouse complex in Wayne County, the facility grows a broad inventory that also includes annuals, hanging baskets, shrubs, trees, herbs, and seasonal crops. Because the majority of the nursery's stock is cultivated on-site rather than shipped in from distant climate zones, plants transition more reliably into local residential gardens and commercial landscapes. Visitors can also explore seasonal displays and bulk gardening supplies, including soils, mulches, and fertilizers tailored to regional soil chemistry.

The digital platform was developed to mirror the in-person guidance visitors receive at the Romulus garden center, where staff regularly assist residents with plant selection, soil preparation, and pest prevention. By organizing this institutional knowledge online, both novice and experienced growers can research plant pairings, spacing requirements, and pruning schedules before visiting the nursery or starting seasonal yard projects.

To complement the online database, Schwartz?s Greenhouse plans to host a series of on-site workshops and virtual webinars later this year. These educational sessions will give local residents direct access to the nursery's horticultural specialists for hands-on planting demonstrations, soil health assessments, and seasonal troubleshooting.

More information about the resource hub, plant availability, and upcoming educational sessions is available on the official Schwartz?s Greenhouse website at schwartzgreenhouse.com or by visiting the Romulus location at 30705 Sibley Road.
