Futurepace Tech Ltd Seeks To Replace Harmful Single Use Plastic Water Bottles

June 27, 2015

June 27, 2015 -
In light of the increasing health risks posed by utilizing plastic bottled water, the London based company; Futurepace Tech Ltd has introduced their stainless steel water bottle. The water bottle being made of food-grade steel is BPA-free therefore, minimizing health hazards associated with plastics and associated bacteria.

National Geographic's Green Guide is quoted as saying, "Water aside, the plastic used in single-use bottles can pose more of a contamination threat than the water."
With the degradation of the plastic in bottles, they release chemicals like Benzyl butyl phthalate (BBP), which is a thought to disrupt hormones. The decay of some plastics are also known to discharge DEHA, a suspected cancer causing product. Plastic bottles are also porous, making it easier for bacteria to breach the container, especially if reused. The quality of the retailed bottled water has come into question in light of a 2008 investigation by the nonprofit Environmental Working Group, some of the bottled water may be despoiled by untested industrial chemicals, leaving it no safer than ordinary tap water.

According to the Huffington Post; a water bottling company, which supplied 14 different brands, of their own

accord issued a recall on the 21st of June 2015, due to the fact that they discovered one of their spring water sources was contaminated with E. coli bacteria. This was a serious hazard, as E. coli can cause severe health problems in humans, especially where the immunity is weakened.

The stainless steel water bottles promoted by Futurepace Tech Ltd proves a necessity in maintaining the quality of drinking water. The company opted to avoid complicated sports water bottles' designs and instead chose a minimalist style making it easier and more efficient to clean. The food grade stainless steel used in the manufacturing of the bottle prevents any change to the neutral flavor of water, while adding to its robustness. With a capacity of 600 ml, most users have revealed it to be a sufficient amount to carry around for replenishment. Futurepace Tech Ltd, is quoted as saying; "We are committed to innovation, sustainability and providing premium products to support our clients' healthy outdoor lifestyles."

The success and utility of the bottle can be further gauged by the positive customer reviews for the product. Feedback left on their Amazon store showed a thorough appreciation for their water bottles. One customer expressed his experience, "I recently ordered my Futurepace Tech water bottle and I'm loving it! It's BPA free, leak proof, super insulated with a very innovative design!" Owing to the positive response it received, Futurepace Tech's bottle scored a near perfect rating of 4.8 out of 5.
