Banja Luka, Bosnia and Herzegovina, Aurum Dental Centar Offers Incognito Lingual Braces

January 07, 2019

January 07, 2019 - PRESSADVANTAGE -

Aurum Dental Centar is now offering Incognito braces to its patients in Banja Luka, B&H. Incognito braces are completely invisible, lingual, self-ligating system that is 100% customized for each patient. Lingual, which means behind the teeth, allows patients to undergo orthodontic treatment without anyone ever knowing one has braces.

Banja Luka, Bosnia and Herzegovina, December 26, 2018. Aurum Dental Centar is pleased to offer Incognito braces to its patients in Banja Luka, BH. Incognito lingual self-ligating braces have been used successfully in Europe for many years, and Dr. Jovana Glusac is on the cutting edge of orthodontics offering the Incognito system to her patients in the Balkan area.

Incognito braces are a completely invisible, lingual, self-ligating system that is 100% customized for each patient. These braces are fitted behind the teeth, allowing patients to undergo orthodontic treatment without anyone ever knowing they have braces. This makes Incognito a perfect solution for professionals, sports enthusiasts, and anyone who prefers not to have the traditional ?train tracks? while completing treatment.

In addition to get the best out of invisible lingual braces, Incognito is a self-ligating system, which means it is designed to move teeth smoothly into position using a metal gate to hold the arch wire in place instead of an unpredictable elastic O-ring, which can loosen over time. Self-ligating technology also reduces friction during treatment, leading to a more comfortable experience. This allows for faster treatment times, shorter appointments and amazing results.

This technology, called self-ligating system, that is built into the Incognito System offers more control in the hands of your orthodontist to achieve precise tooth alignment. ?It?s a superior system,? says Dr. Jovana. ?It?s better for the patient, and better for the orthodontist.? The Incognito System is engineered to be small and smooth, which helps patients adapt quickly and comfortably to orthodontic treatment. Incognito is currently the only digitally customized lingual orthodontic system to use self-ligating technology.

When patients visit Aurum Dental Centar, they will take x-rays, pictures, and teeth impressions. Their friendly orthodontic staff uses all of this data to predict the movement of teeth, and outline a treatment plan. Then the impressions are sent to the Harmony lab so customized braces and wires can be crafted using state of the art CAD/CAM technology. This proprietary technology achieves the highest level of precision to treat even severe cases.

Contact the office to schedule a consultation, or to receive more information.
