

Sonimate Announces Philips Sonicare Heads Promotion

January 17, 2017

January 17, 2017 - PRESSADVANTAGE -

Sonimate offers replacement heads which are compatible with Philips Sonicare Proresults toothbrushes. The high-quality brushes ensure that there are always fresh products available to maintain oral hygiene.

Walnut CA: Sonimate and Sarah Dykes are pleased to announce the release of their product promotional offer. The quality brush heads are compatible with an entire range of quality brushes. Top dentists recommend the soft nylon bristles which are easy on the gums. They are approved by the FDA and have passed dentists' official health and safety standards. The #1 Dentists' official standard replacement brush head costs less than the default brush head but works as well as the manufacturer's brand.

The replacement Philips Sonicare Proresults heads come with head caps and last for a standard lifetime. The standard blue reminders and colored ring seasons are ways to encourage optimum oral health. The cheap knock-offs don't have the best standards which are available in the Sonimate heads. The knock-offs have a short lifetime with no head protection and no blue reminders. The cheap type also is missing the colored ring

seasons.

According to a representative of the company speaking in a recent interview, "The replacement head fits Sonicare Proresults, DiamondClean, Healthy White, EasyClean, Flexcare, and Plaque Removal Gum Health. What's more, it also has gentle nylon bristles for an extra soft brush that is easy on the gums. Its angled neck design and contoured shape make it fit the natural shape of the teeth and gives the sturdiness necessary to fight plaque and gingivitis two times better."

The bristles are well-built with comparable quality in the original brand. The replacement is a worthy substitute for the Philips toothbrush and costs only a fraction of the price of the standard manufacturer's replacement. The care of teeth and gums is important for the health of the teeth and for the entire digestive system. The regular brushing and massaging of the teeth and gums stimulates the digestive juices and removes bacteria which cause dental issues such as bad breath.
