

Barton Haynes Advisory Board Announces Mama Maria Wellness Clinics MMK Sponsored Programs

June 09, 2015

June 09, 2015 - PRESSADVANTAGE -

Barton Haynes is proud to announce the MMK Sponsored Programs on behalf of Mama Maria Wellness Clinics.

Mama Care Initiative:

Mama Maria Clinics officially has rolled out the National Health Insurance Fund program (NHIF) and in honor of Mother's Day, we've chosen to celebrate NHIF with the launch of our new MamaCare program.

A woman dies every 90 seconds from complications of pregnancy. 90% of these deaths are preventable. Most take place in developing countries, in the hours around the time of birth. We want to give as many mamas as possible the gift of safe delivery, and have set a goal of enrolling 50 new mamas in the month of May. You can help us get there as we provide:

Access to quality perinatal services, including safe delivery, free of charge, at MMC or any other accredited MMC partner, Government health insurance for 12 months, length of pregnancy, plus 3 months. Coverage at

accredited providers throughout the nation for mother, her newborn, and family Emergency services/transport.

"The recent addition of an ambulatory vehicle provides the much needed access to healthcare that was previously unheard in the rural communities of Kenya. We are now able to provide urgent and emergency services for evaluation, initial treatment and triage for patients at our local clinics" says Barton Haynes.

Barton Haynes successfully supported the charitable donations to the Mama Maria Kenya clinic from various local supporters in generating funds to provide goats to several local families in the region. Goats provide a unique life support to the indigenous people as they reproduce rapidly and can provide a consistent source of both milk and meat to the impoverished families living in the region.

Mama Maria Clinics (MMC) provides innovative, sustainable healthcare to underserved African communities. An indigenous, community-centric solution, we are building an entirely new healthcare infrastructure designed to serve the poor of rural Africa.

Health Education:

We strive to empower our population through education and awareness, enabling them to take ownership of their own health. We offer outreach, health and education fairs, classes, screening and vaccination drives. With a greater understanding of basic health, nutrition, hygiene, and sanitation, we believe rural populations can aid in the elimination of many communicable infections and diseases.

Health Education: We offer education on mode and spread of infection, including preventative techniques and measures. Availing education and understanding to the populations we serve, we are able to impact the prevention and reduction of such diseases.

HIV/AIDS:

Although the prevalence and incidence of HIV/AIDS is still high in communities such as those we serve, in this day HIV/AIDS and age, its spread, morbidity, and mortality can be greatly reduced with appropriate care. MMC offers education, preventative precautions, screening, testing, and ultimately, early therapy. We also strive for health maintenance in the population by encouraging adherence to therapy, counseling, and support for those patients with chronic diseases.

We provide comprehensive care with screening, testing, and diagnosis of HIV. We offer early treatment with antiretrovirals. We offer education on transmission and preventative measures, as well as the importance of early testing. We focus on therapy adherence and follow-up to improve outcomes. Our goal is to reduce prevalence, mortality and morbidity of HIV/AIDS in the areas in which we operate.

Maternal & Child Health:

We believe every child deserves an optimal entry into the world. We therefore work to ensure the health of each Maternal Care pregnant mother and child by offering support from the prenatal to beyond birth. We focus on family planning, nutritional supplementation, pregnancy monitoring, perinatal classes, HIV mother-to-child prevention, and labor and delivery services. Beyond delivery we provide continued well-baby checks, subsequent check-ups, immunization services, as well as nutritional monitoring for mother and child.

Our goal is to dramatically improve chances for a healthy pregnancy, safe birth, and the disease-free survival of the infant.

We employ a hands-on approach to ensuring a healthy pregnancy and birth. We offer testing, perinatal classes and care, delivery services, neonatal care and support. We stop the spread of HIV to the baby through mother-to-child transmission prevention. We provide childhood vaccination, nutritional support, and weight monitoring. We offer the best chance for life by optimizing circumstances in-utero and postpartum.
