

# Mindmachines.com Advances Roshiwave Mental Fitness Device with Enhanced Brainwave Disentrainment Protocols

*March 31, 2026*

Dallas, Texas - March 31, 2026 -
Mindmachines.com has announced significant enhancements to its Roshiwave, incorporating advanced brainwave disentrainment protocols designed to help users achieve deeper meditative states and improved mental clarity. The third-generation device now features expanded protocol options and refined photostimulation capabilities that support various wellness and cognitive enhancement applications.

The enhanced Roshiwave utilizes Dynamic Neuro-Activation technology, delivering precisely calibrated light patterns through specialized RGB LED glasses to influence brainwave frequencies naturally. This approach differs from traditional entrainment methods by dis-entraining repetitive mental patterns rather than forcing synchronization to specific frequencies, allowing the brain to normalize its activity through its own error-correction processes.

The updated device incorporates all classic ROSHI-style protocols that have undergone extensive research,

plus newly developed multiplexed versions that expand its functionality. Users can modify the color output of the glasses through simple button controls, enabling one pair of glasses to emulate the entire range of original pROSHI neurodynamic activator glasses configurations.

"The evolution of our pROSHI protocols represents a significant advancement in mental fitness technology," said Fred Williams, spokesperson at Mindmachines.com. "These enhancements allow users to access meditative states typically associated with experienced practitioners, regardless of their previous meditation experience."

The improvements address growing interest in technology-assisted approaches to mental wellness and performance enhancement. The device supports applications including stress management, accelerated learning capabilities, and behavioral modification through its expanded protocol library and improved navigation systems.

The Roshiwave operates through what the company describes as an Error-Correction System for the Brain, which helps normalize brainwave patterns to support improved performance across various cognitive and wellness areas. The device guides users to achieve deep meditative states beyond the perception of time without requiring conscious effort or prior meditation experience.

The enhanced capabilities come as the mind machine market experiences increased demand from individuals seeking non-invasive methods for achieving altered states of consciousness and ganzfeld effects that support inner peace, personal wellness, and improved sleep quality. The device is positioned as a wellness tool for general stress management and cognitive enhancement rather than as a medical device.

The technology represents an evolution in the field of brainwave disentrainment, building upon decades of research into photostimulation and its effects on neural activity. The latest protocols incorporate findings from recent studies on brainwave normalization and the relationship between light frequency patterns and cognitive states.

Mindmachines.com emphasizes that individuals with seizure disorders should not use the product, maintaining its commitment to user safety while advancing the technology. The company continues to refine the device based on ongoing research and user feedback from its global distribution network.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, and meditation machines. The company serves as the worldwide distributor of the Roshiwave self meditation device, which is currently available through their

website.
