BioEdge Research Labs Expands Digital Presence with Launch of Social Media Channels for Scientific Community

August 10, 2026

August 10, 2026 -

BioEdge Research Labs, a Wyoming-based supplier of research-grade peptides, today announced the establishment of official brand channels across LinkedIn, TikTok, Instagram, and X platforms. The new digital channels will serve as documentation and research-communication resources for laboratory and research customers seeking information about the company's catalog of research compounds and testing protocols.

The company's expanded digital presence includes official channels on LinkedIn at https://www.linkedin.com/company/135967348, Instagram at https://www.instagram.com/bioedgeresearchlabs, X at https://x.com/bioedgelabs, and TikTok at @bioedge. Each platform will feature company news, product availability updates, Certificate of Analysis (COA) documentation, and educational content specifically designed for qualified researchers and laboratory professionals working with research-grade reference materials.

Documentation transparency has become increasingly important for research institutions purchasing research peptides, as laboratories require detailed verification of compound purity and composition for their

experimental protocols. BioEdge Research Labs addresses this need by providing comprehensive COAs with individual lot numbers for every batch, ensuring researchers have access to complete analytical data for their research compounds.

The company maintains rigorous quality standards through a seven-point testing protocol conducted by an independent third-party laboratory. This comprehensive analysis includes purity assessment by RP-HPLC with specifications exceeding 98 percent, net peptide content verification, identity confirmation by LC-MS, endotoxin screening using LAL methodology, fentanyl presence analysis, microbial sterility screening, and heavy-metal screening for arsenic, cadmium, lead, and mercury. Multiple vials are sampled per lot and reported individually alongside batch averages, providing researchers with detailed analytical data for their research materials.

"Establishing these digital channels represents our commitment to transparent communication with the research community," stated Dr. Noreen Sherazi, Medical Writer and Research Contributor at BioEdge Research Labs. "By providing accessible documentation and educational resources through these platforms, we enable laboratories to make informed decisions about their research materials while maintaining the highest standards of analytical transparency."

The social media channels will focus exclusively on content intended for qualified researchers and laboratory professionals, maintaining the same research-use-only parameters that govern all company products. Channel content will emphasize documentation accessibility, testing methodology, and scientific education relevant to laboratory research applications.

BioEdge Research Labs specializes in providing research peptides sourced from US manufacturers that follow GMP protocols and lyophilized domestically. The company's catalog features research-grade materials supported by independent third-party testing and comprehensive documentation. The company has been recognized for its excellent customer service and high-quality products. Additional information about the company's research compounds and testing protocols can be found at the company's website.

All products referenced are for laboratory research use only. They are not intended for human or veterinary use, or for use in diagnostic procedures, and are not intended to affect the structure or any function of the body. These products have not been evaluated by the U.S. Food and Drug Administration and are not intended to diagnose, treat, cure, or prevent any disease. BioEdge Research Labs is a chemical supplier and is not a compounding pharmacy or outsourcing facility as defined under Sections 503A or 503B of the Federal Food, Drug, and Cosmetic Act. BioEdge Research Labs makes no therapeutic claims.
