

Volume And Bass Celebrate Latest Wireless Speaker Bluetooth With \$60 Introductory Discount

June 16, 2015

June 16, 2015 - PRESSADVANTAGE -

Volume and Bass has just released their latest wireless speakers Bluetooth product. To celebrate this launch, they have made it available on Amazon with a \$60 discount, meaning it now costs just \$69.99, instead of the usual \$129.99. This offer is for a limited time only, and customers are encouraged to get theirs quickly.

"We believe we have created the best wireless speakers Bluetooth", says Huy Nguyen from Volume and Bass. "However, we don't expect people to just take our word for it. Rather, we hope they will purchase it to see it for themselves, particularly with this significant discount."

The speaker has premium clarity sound, as well as bass enhance technology. Furthermore, it has a self-boosting amplifier IC. It is a small speaker, at just 50mm diameter, but it is incredibly powerful thanks to its enhanced bass resonator. This delivers a deep bass, crisp and clean sound. The speakers have 10W total power.

It also comes with a built in 2000mAh Li-Ion rechargeable battery. This gives it as much as 12 hours of playtime. Additionally, it has a built in microphone, which allows for hands-free speaker phone calling. It is

very easy to link the speaker to a mobile device, as no code or pin is needed. It is also compatible with any device that is Bluetooth enabled, be they smartphones, laptops, DVD players or more. Additionally, non-Bluetooth enable devices can link to the speaker using the 3.5mm audio jack.

"Our device is highly portable thanks to its easy clip design", adds Huy Nguyen. "It is a sleek looking device with 360 stereo sound and a unique dual membrane, which gives it the superb bass sound quality. Indeed, it allows for music to be played loudly with high definition sound while on the go. No other portable speaker of the same size offers this kind of sound or quality."

The speaker is very multifunctional. It is able to read TF cards, SD cards and U disks in MP3 format. It also has AUX input and functions as a hands-free speaker phone thanks to the aforementioned built in microphone. Furthermore, it can be used as a telephone charged thanks to the battery power bank.

One of the things that really makes this device stand out is how good it looks. It is truly compact, which allows it to be carried around with ease. The top and bottom layers are made from silicone, which prevents the device from slipping. The materials is of very high quality, making the speakers highly durable. It is an incredibly user friendly device that can be used on all Apple and Android devices, allowing people to enjoy music on the go. Finally, it also comes with a bonus travel pouch while stocks last.
