Plumbers Edmonton Is Now Offering Water Treatment

May 04, 2020

May 04, 2020 -
Plumbers Edmonton, a plumbing and heating company based in Edmonton, Alberta, Canada, has announced that they are now providing water treatment services to homeowners and other property owners in Edmonton and neighbouring areas. This is to make sure that the water supply for the home or building is as pure as possible. They provide water softeners and filters because water in Canada is usually coarse, which can cause problems with the skin, brain, gut, lungs, heart, and more. Water softeners and filters can convert hard water into 100 percent pure and fresh drinking and washing water.

Lief Simons, President and Owner of Plumbers Edmonton, says, ?We're really excited to announce that we are now offering water treatment services to ensure that your water supply is pure and does not contain chemicals and microorganisms that can cause problems with your health, clothing, and plumbing systems.?

Through the use of advanced neutralizing methods, the water in the home is transformed into crystal clear water that will not harm the hair, skin, nails, and other parts of the body. It will also help minimize the risk of people having gastrointestinal problems. One of the ways used to treat rough water is by using a reverse osmosis water filter system. Other methods of water purification include ion exchange and sand filtration.

Lief Simons points out that the use of water softening technology is good for the health of the hair, skin, and

nails. It can also prolong the lifespan of the various pipes and appliances in the home. And to ensure that the water is safe for drinking and cooking, they offer top of the line reverse osmosis drinking water systems, which basically allow homeowners to get bottle quality water right from their faucets. Specialty water filter systems are also available for various water issues, such as odours, excessive iron, sediment, or acidity of the water.

Meanwhile, this plumbing company has been serving the needs of homeowners all across Edmonton with excellent service and advice for almost a century. Throughout that time, they have built their business and reputation through word-of-mouth referrals.

Lief Simons adds, ?We deliver repairs, restoration and mitigation solutions to the insurance industry. We also developed a network of suppliers from a variety of trades who can work on getting your customers up and running as fast as possible. We take the hassle out of the repair and restoration work for both you and your clients and keep a sharp eye on costs.?

To ensure that they are able to provide quality services, they carefully monitor the performance of their contractors. These contractors know that if they provide the best work possible, they will get more work from Plumbers Edmonton.

Plumbers Edmonton also regularly provides training and upskilling opportunities for its technicians to make sure that they are up-to-date with current trends, safe work practices, and innovations, such as hydrojetting, Legionellas control in warm water systems, thermostatic mixing valve servicing, confined space entry, safe working at heights, backflow testing, restricted electrical, and traffic management. And in addition to their well-maintained plant, equipment, and tools, they have a fleet of commercial vehicles that have been properly equipped to allow their technicians to provide service and maintenance work while complying with high quality and safety standards.

They can provide both emergency repairs and routine plumbing maintenance services. They are able to offer assistance in a number of emergency situations, such as faulty water heaters, frozen pipes, dripping faucets, boiler malfunctions, low water pressure, leaking toilets, and more.

They also warn homeowners and other property owners in Edmonton not to ignore the seemingly small issue of a clogged drain. It can actually lead to more serious issues that would be more difficult to remedy and be more expensive to repair. Some signs to look for include the water draining very slowly, bad odour from the bathroom or kitchen, or gurgling sounds coming from the drains.

Homeowners and other property owners who are interested in getting the services of a quality Edmonton plumber may want to check out their website, or contact them through the telephone, or via email.
