

Newly Opened Pool Services Baton Rouge Company Serves BR Community

April 20, 2017

April 20, 2017 - PRESSADVANTAGE -

BR Pool Cleaning & Services offers services to the Baton Rouge community from their newly opened business location. The pool contractors offer several different services to meet homeowner demands.

Baton Rouge LA: BR Pool Cleaning & Services and Shane Hernandez are pleased to announce that they are newly opened and serving the Baton Rouge community. The pool services Baton Rouge team offers multiple types of services to meet the needs of pool owners. Some of the specific services include monthly maintenance, filter cleaning, drain and acid wash, tile cleaning and repairs and liner replacement. Pools are constantly exposed to the outside environment, which requires consistent care.

Wind and rain can contaminate the pool and can damage it in the long run. Wind carries dust, debris and various microscopic solids. Some solids are caught by skimmers or pool filters, but smaller substances can easily escape the filtration system. Some of the escaped solids will form deposits on pool tiles, causing the pool to lose its pristine appearance and luster. As for the rain, it can easily contain algae spores, bird droppings, and inorganic chemicals which can affect the pool's pH balance. All of this may lead to an unsightly pool or, even worse, a pool that can get someone sick.

Shane Hernandez explained to an interviewer, "Having a pool in your backyard is a great source of fun for you and your family. That is why you should let the best pool cleaner in Baton Rouge make this the exact thing you intended it to be, an excellent place for you and your family to enjoy. With regular maintenance, many of the negative issues associated with pool ownership will disappear."

"We can set up a regular schedule," he continues. "One of our seasoned professionals will service your pool on a regular basis. Lack of proper maintenance can cut the lifespan of your pool by fifty percent. Green water indicates an algae bloom, but also can be a breeding ground for bacteria and E.coli."
