

Pest Control Cullman AL Team Responds To Record Number Of Termite Incidents In April

May 04, 2017

May 04, 2017 - PRESSADVANTAGE -

Advanced Pest Control offers solutions for multiple pest infestation issues throughout the Cullman and surrounding areas. The company responded to a record number of termite events during April.

Cullman AL: Advanced Pest Control and Scott Wilson are pleased to announce that they have solutions for the record-high number of termite incidents during the month of April in multiple locations throughout Alabama. In addition to termites, mice and rat issues are widespread in Alabama. Mosquitoes and other flying insects are expected to be rampant during this season due to a warmer than normal winter.

The pest control Cullman AL firm also warns Alabama residents to be aware of the spread of the Red Tawny Crazy Ant. The ants are very destructive and very difficult to get rid of if not spotted early on. Pests including rats, mice and others get into food, leave feces trails and spread germs. The APC of Alabama can be the solution for a wide range of pests. The company has been helping home and business owners in the Huntsville, Birmingham, Cullman, Jasper, Florence, Guntersville, and Gulf Shores area get rid of the insects for more than seventeen years.

According to owner Scott Wilson, "It doesn't matter if it is a termite, cockroach, ant, or general bug infestation; we have packages to solve your infestation problem at prices your budget can afford. Our professionals at Advanced Pest Control are skilled in identifying the bugs you see and can investigate your property to locate the ones you don't."

The packages provided by Advanced Pest Control can be a general service package or a one-time treatment. The certified professionals will treat a residence, commercial or industrial property for termites, bed bugs, cockroaches or other pests such as fleas, ants and spiders.

The solutions are safe and effective in ridding residential or commercial properties of the pests that affect comfort and health. Where children or pets are present, there is no need to worry. The chemicals are pet-friendly and child safe.
