

iProven Launches First Triple Mode Thermometer TMT-215

February 15, 2018

February 15, 2018 - PRESSADVANTAGE -

iProven is proud to announce they have launched their first Triple Mode Thermometer: the TMT-215. This Triple Mode Thermometer has the traditional ear- and forehead function that can be found in iProven's Dual Mode Thermometers, but it comes with a handy extra feature: the object mode, to measure the temperature of a room, a bottle or a baby bath.

Alice, the spokesperson for iProven, states: "This thermometer is a must-have for families with babies. It is the solution to perform quick fever measurements, without causing any discomfort." The forehead mode can be used to get a quick temperature indication. This is also the preferred way of measuring for babies younger than 6 months. For older babies and for more accurate readings, the ear mode can be selected. The third function, the object mode, gives an indication of the temperature of a bottle, bath or bed.

Alice adds: "An important feature of this device is the mute switch. This makes it possible to perform a measurement without waking up your baby. With the backlit display, the temperature can be read even in the dark. That's why this thermometer is a great device if you want to measure the temperature of your baby while he or she is asleep."

The memory function has room to save up to 20 measurements, so health developments can be easily tracked. The thermometer comes in a pouch for clean and easy storage. Alice stresses: "People tend to forget how important it is to have a clean thermometer. If the lens of the probe is dirty, this can lead to inaccurate readings. Use a disinfecting wipe to clean it regularly."

In the manual, all details about iProven's TMT-215 can be found. Those who are interested in this device are advised to visit iProven's website or their sales channel on Amazon.
