

Home Mechanix Highlights Enhanced Capacity Ductless System For The Cold Climate In Pittsburgh

June 03, 2022

Pittsburgh, Pennsylvania - June 03, 2022 -
Pittsburgh, Pennsylvania based Home Mechanix is pleased to bring their community's attention to the Daikin Aurora? Ductless Mini Split Heat Pump. Home Mechanix has established itself as the trusted resource for HVAC repair and installation in the North Hills of Pittsburgh, including the Allegheny, Beaver and Butler Counties.

Mat Stone of Home Mechanix says, ?Pittsburgh weather can be something of a rollercoaster ride. We have even had some homeowners say that they need heating and air conditioning on the same day. If you have had a similar issue, we have got good news for you. We have a solution you can use to maximize your home comfort while minimizing your home heating and cooling bill: the Daikin Aurora. When you have a Daikin Aurora Ductless Mini Split Heat Pump, you have a smart system that performs all year long.?

Daikin has proven itself a leading innovator and provider of advanced, high-quality air conditioning solutions for residential, commercial and industrial applications, and the Aurora is no different. Designed to keep

people comfortable in both extremely cold winter and extremely hot summer conditions, the new Daikin Aurora has been redesigned to withstand extreme weather conditions, even when temperatures are down to -13 degrees or up to 115 degrees. The Daikin Aurora is a powerful workhorse that is able to keep temperatures comfortable regardless of how bad the weather or the season might be.

With the Daikin Aurora Ductless Mini Split Heat Pump, homeowners do not have to concern themselves with buying and installing two separate HVAC systems. There is no need for both a furnace and an air conditioning system. Going ductless allows homeowners to streamline their home with just one unit that takes care of both heating and cooling.

Home Mechanix recommends the Aurora? as a great problem solver that can be used to heat and cool one room, one area or the whole house. According to the company, it is the solution for numerous problems, such as having hot and cold spots throughout a house; upgrading from an antiquated furnace or air conditioner; providing HVAC solutions for sunrooms, basements, attics and garages that are being converted into living space and more. On top of all of that, ductless systems such as the Daikin Aurora Ductless Mini Split Heat Pump also mean reduced energy bills and a greener home. Read more here: Cold Climate Ductless In Pittsburgh.

The Daikin Aurora has a number of impressive features that make it the perfect HVAC solution for Pittsburgh residents. The Program Dry feature allows humidity levels to be reduced, Hot Start reduces cold drafts when the heating operation starts or when the unit changes from cooling to heating and the Comfort Airflow Mode adjusts the direction and airflow rate so that the air from the unit does not blow directly on the occupants of the room. The Aurora also has a Titanium Apatite Photocatalytic Air Purifying filter that combines the air-purifying filter and titanium apatite photocatalytic deodorizing filter in a single highly effective unit. For those who need more heat or cold, it comes with a dedicated button that gives a boost to the cooling or heating power for a 20-minute period, even if the unit is already operating at high capacity.

Anyone who wants to install a Daikin Aurora system also has the freedom of choice to choose between Single Zone Ductless or Multi Zone Ductless. Single Zone Ductless is the perfect fit for heating or cooling one area of a home and can cover a square footage of approximately 1,200 sq ft. The Multi Zone Ductless is the perfect solution for multi-room applications that require room-to-room comfort. Stone says, ?You have flexible design options with the Aurora mini split system. There is a solution for any home or property. Your options include wall mounted, floor mounted, ducted cassette and the modern Emura indoor head. If you want help, our team at Home Mechanix is always ready to help you.?
