

Customers Rank Avasia The Best OTC Prenatal Vitamins

July 01, 2015

July 01, 2015 - PRESSADVANTAGE -

Beaverton, OR based Avasia, has received stellar reviews since their OTC Prenatal vitamins were released on the market. Due to these rave reviews, some of the Amazon reviews left by their customers have described them as the best OTC Prenatal Vitamins. Not only do the vitamins work to ensure that mothers are healthy and obtaining all of the necessary vitamins for themselves and their unborn infant, they also provide a better experience when compared with other vitamins of this kind.

One of the most talked about aspects of the vitamin is its ability to be swallowed without the nausea that is often associated with prenatal vitamins. One happy customer explains: "I was having horrible nausea from a different kind of prenatal pill. I was always super cranky and moody because I was constantly throwing up and having to retake pills in the morning. My grandmother (a nurse) said you should try Avasia, I've heard nothing but good about them around the hospital. She read the nutritional facts and bought me a bottle to try. Needless to say these are amazing. They do not make you sick, they are easy to swallow, you only have to take one."

This, and other glowing reviews are what led many to claim that Avasia has the Best OTC Prenatal Vitamins

available. The company has said that even with the appropriate foods being eaten and medical guides being followed, mothers can often miss out on some of the key nutrients required for a healthy baby. Avasia believes that with their product mothers and babies receive more of what they need for the healthy growth and development of the brain, spinal cord, and everything else. They explain: "AVASIA Prenatal Vitamins are specifically designed by our Advisory Board of Doctors and Scientists to ensure you get the best combination of vitamins and minerals you need. So, they contain more folic acid and more iron than a normal multivitamin. This is really important."

The folic acid in Avasia's prenatal vitamins offers babies the support needed to prevent neural tube defects. These defects of the brain and spinal cord are very serious. The vitamins also contain a high level of iron, which helps the baby grow, and helps the mother to stay healthy and avoid getting anemia, which can make childbirth quite dangerous. Other vitamins present include D3 for the regulation of calcium, B12 for nervous system development and production of red blood cells, A for the development of the immune system, eyes, heart, teeth, and ears, and Zinc, which helps grow healthy tissue and internal organs.

Avasia invites all those interested in learning more about their prenatal vitamins and all of the benefits associated with them to visit them on Amazon or through social media accounts, such as <https://twitter.com/AvasiaPrenatal>
