

Best Hand Held Sandblasting Gun Added To Online Store

January 09, 2019

January 09, 2019 - PRESSADVANTAGE -

Cheap 3D Printer Cost has announced that they have recently added a new item to their online store. The company states that they are now offering customers a new hand held sandblasting gun. The gun is currently available for purchase and offers a number of benefits to DIYers.

Roy, a spokesperson for the online store, says, "This is a great product to have in your household. You can use the sandblasting gun to keep all of your things clean and free of buildup that can happen over time."

The company states that the sandblasting gun is a fast, easy and completely safe way to remove surface buildup on a number of items from household furnishings to exteriors. The sandblasting gun comes with a one quarter inch quick coupler connector and a nylon air hose gravity feed for effective blasting. From Lematec, the sandblaster gun has an average air consumption of 7 SCFM and a working pressure range of 70 to 120 PSI with a maximum range of 150 PSI. It is gravity fed and Lematec stands behind all of their products with a lifetime warranty.

"You can use this thing for so many tasks," says the online store representative. "Use it to refresh or refinish furniture and so many other items. It can remove rust from iron, remove glass etching, clean dirty grout and tile, and do just about anything else that you need it to do."

The Lematec sandblaster gun, which can be viewed at the Cheap 3D Printer Cost website by visiting <https://vimeo.com/roywingatedigitalmedia>, has a fully adjustable control valve so that users can automate the flow precisely. Gravity forces particles into a mixing chamber where they will then be projected through a steel nozzle. This design gives users complete control over the pressure of the blast and where it lands. The company states that the new sandblaster gun is also functional with a number of media types. It can accept various blasting media including baking soda, crushed walnut shells, glass, aluminum oxide, and various others. The company states that this gives the user more control over the types of jobs that they can do with the sandblasting gun.

Sandblasting guns are compressed air tools that are designed to propel pressurized abrasives toward other objects. This is done at a very high velocity so that it effectively grinds down surfaces to smoother finishes. They can be used to clear away debris and contaminants that have built up over many years. Sandblasters typically consist of air powered pressure guns that are connected to hoses and compressors for operation.

There are three types of sandblasters, namely, the pressure model, and the gravity fed and siphon models. Cheap 3D Printer Cost states that their new sandblaster gun is a gravity fed model. Gravity fed sandblasters include handheld guns that are connected to air tanks using a hose. When the trigger of the gun is pressed down and held, the device allows for compressed air to flow through the nozzle of the sandblaster gun. At the same time, high velocity of air and gravity are pulling sand or other abrasive materials from the hopper into the gun and forcing them out of the barrel. This gives the sandblaster gun the effectiveness to remove any number of debris and buildup from a number of surfaces without causing damage to the surface. Sandblasting has been used for decades as a means of removing hard to remove debris and now the company states that they have given consumers the opportunity to have this effective debris removal tool in their own homes.

Cheap 3D Printer Cost has recently added a number of new items to their online store. All items are checked for quality and then provided to customers via the online portal. The store offers a number of categories ranging from DIY home and auto items to technical gadgets. The company spokesperson states that they expect to continue adding new products until they have a selection of items for everyone, no matter their need or lifestyle. Currently, the company offers a shipping special provided that customers meet the requirements for ordering.
