

Overflow Water Damage Restoration Opens New Branch In Fort St. John

October 15, 2018

October 15, 2018 - PRESSADVANTAGE -

The famous home restoration company ?Overflow Restoration? has just opened its new branch in Fort St. John, BC.

All of the services that they provide in their other business locations can now also be availed by the residents of Fort St. John. Their workers are helpful and give on-spot estimates. Overflow Restoration Fort St. John has a very positive background with more than 4.7 stars on various service sites like Yelp, Google Business, and FourSquare.

They provide almost all services related to home restoration. The services that they are going to offer in Fort St. John are as follows.

Water Damage Restoration: In their Water Damage Restoration Services, Overflow Restoration Company is going to help the residents of Fort St. John in getting rid of water-related problems by providing solutions like

Flood Cleanup, Water Cleanup, and Water Extraction. This means that from now on there will be no need to worry about issues involving Water Damage Restoration.

Fire Damage Restoration: As most homes in the BC area are built with wood, this is the reason that they catch fire too quickly. Homeowners can put it out themselves or call firefighters to do so. What's left after a fire is put out is damaged furniture. Residents cannot live in a damaged home; this is where the company's services become useful. They aim to provide the best solutions for Fire Damage Restoration.

Smoke Damage Restoration: Sometimes people hire inexperienced technicians and restoration companies to get rid of all the damages caused by fire to their home. Most of them don't even know about dry smoke residues. Smoke and soot damage also decolorizes paints of walls and varnishes of furniture. The company says they are the only Professionals in most of the Canadian cities when it comes to Smoke Damage Restoration.

Mold Remediation: Mold is another issue faced by old homes. Most homeowners might not be familiar with the term "Mold." Molds are types of bacteria that start growing in the wooden houses. Mold is not only responsible in weakening the home, but its exposure to humans can also cause many diseases.

Many customers have left glowing reviews for the company's services. Miss Jennifer Ken said: "My sister lives in Fort St. John, and she has taken the name of tiptop restoration during phone calls many times. I am very excited that they are opening a branch here in Fort St. John."

Mister Robert George said: "I used to live in Fort St. John. There, I once used their Water Damage Repair Services, and I simply loved the way they worked too quickly and properly. I am looking forward to trying their services here in BC too."
