

Aeration Septic Inc. Keeps Northeast Ohio Septic Systems in Compliance

March 20, 2019

March 20, 2019 - PRESSADVANTAGE -

Tuscarawas County in Northeast Ohio has made some changes in septic system maintenance standards in recent years, and businesses - and residents - are doing what is necessary to comply. One main change allows Point of Sale (PoS) septic inspections to be performed by approved septic service providers such as Aeration Septic Inc. (ASI).

"The Tuscarawas Health Department is taking the safety of its water supply seriously," said an Aeration Septic representative. "When septic systems are not maintained and operating properly they have the potential to release harmful bacteria and toxins into the surrounding environment. It pollutes streams and creeks that will harm wildlife and can even infiltrate into the water table. Those with well systems can be essentially pouring poo water out of their taps; nobody wants that. We feel most people are responsible and care about their environment, they just aren't aware of the issues unmanaged septic systems can create."

The change will allow Aeration Septic to provide its renowned septic services to the residents of Tuscarawas county and far beyond. "We are excited about the opportunity to provide our septic inspection services to Tuscarawas county residents," said the Aeration Septic representative. "We understand that most folks

don't know much about septic systems or how to maintain them. So we take the time to give our customers the most thorough inspection available, as well as tips, advice and knowledge on owning a home that uses one. We also offer service contracts for these systems so homeowners can rest easy knowing they have a professional in their corner preventing issues and someone they can call right away if something does happen."

Aeration Septic Inc. offers a number of services, which can be viewed and explained in more detail by visiting <https://www.aeration-septic.com/septic-services/>. Aeration Septic provides installation, maintenance, repair, operation, and reporting services for these systems. Failure to properly maintain these systems can result in the creation of a public health hazard. Regular maintenance and upkeep will prevent these dangerous situations and end up saving homeowners a lot of money in the long run.

Aeration Septic also replaces or installs new wastewater treatment plants, also known as Extended Aeration Sewage Disposal Systems or Small Package Treatment Plants, which work to treat wastewater. With the company's staff on hand to walk clients through the process from beginning to end, clients can be assured that the installation meets all the requirements and regulations of local health departments as well as the Ohio EPA. The company has the ability to rebuild and repair any component of a wastewater treatment system. Aeration Septic's service professionals are highly trained with a wealth of experience, and will come up with a plan of action to have the system operating effectively as quickly as possible. The full breadth of Aeration Septic's offerings can be accessed at <https://www.aeration-septic.com>.

The company is able to craft operation plans that satisfy all regulations. The services offered by Aeration Septic's licensed wastewater operators include:

- A 30 minute settleability test used to determine the solid content and settling rate of the solids in the clarifier
- Oil and grease checks on all tanks
- Air filter cleaning
- pH and ammonia tests on aeration chambers to determine their operational performance
- Cleaning of clarifier walls to reduce solid build up
- Setting and adjustment of diffusers
- Weeding and cleaning of surfaces and sand filters

-Chlorination and dechlorination of chlorine contact tanks

-Water quality inspection at outfalls

To save their clients time and spare them additional headache, Aeration Septic can report directly to the Ohio EPA and local health departments regarding the outfall quality and plant operation on the client's behalf, meaning that there will be no middleman.

Aeration Septic allows potential clients to schedule a visit online for septic tank services. Those interested may also contact the office at Aeration Septic Inc. via phone or email for further details regarding the company's services and availability.
