

Kirkland Dentist Discusses the Benefits of Cosmetic Dentistry

July 07, 2015

July 07, 2015 - PRESSADVANTAGE -

Kirkland, Washington ? Paramount Dental Center, a Kirkland dental practice, recently announced the benefits of cosmetic treatments for all community members. Colin P. Del Rosario, DDS, recently discussed plans for cosmetic dentistry treatments for patients in Kirkland, Washington, and surrounding areas. Dr. Del Rosario is a specialist in cosmetic dentistry services in Washington.

"I believe that any reputable dental practitioner needs to continue their education in dentistry to keep up with modern advances, so that they can offer the best orthodontic and prosthodontic services for their clients," states Kirkland dentist, Dr. Del Rosario. "As part of my continuing education, I routinely take part in instructional courses and clubs to enhance and grow my skills."

Dr. Del Rosario, a Washington cosmetic dentistry expert, has many accomplishments in Dentistry under his belt since he earned his Doctor of Dental Surgery from the University of Washington School of Dentistry. He currently acts as an Affiliate Professor at the University of Washington School of Dentistry and routinely participates in educational courses and clubs. He is a graduate of the world-renowned Kois Center for Advanced Dental Education, as well as the Esthetic Professionals Comprehensive Dentistry Study Club.

Among the most popular of his cosmetic dentistry offerings is his expert teeth whitening service. "In our cosmetic dental practice, this treatment involves using an effective light-activated agent that can lift deep discolorations, as well as surface area spots, from the teeth," says Dr. Del Rosario, "another alternative is the use of a home teeth whitening kit. Patients who prefer this alternative get a prescription whitening gel and other devices in addition to clear and detailed instructions from the cosmetic dentist on what to do."

For dental crowns, patients at Paramount Dental Center office do not have to wear a temporary crown while they wait days for the permanent crown to be manufactured in the laboratory. "The advanced CEREC technology available at our practice enables patients to obtain a perfectly molded crown in just one visit," adds Dr. Del Rosario, "the computer innovation develops a 3D image of the customized crown, and the block of porcelain is sculpted right then and there in the office so that the patient can take it home right away."

Implants for missing teeth, as well as veneers to cover up broken or permanently stained teeth, are also available.
