

Lakes Carpet Cleaning Identifies Myths About Carpet Cleaning

May 06, 2019

May 06, 2019 - PRESSADVANTAGE -

When professional carpet cleaning was started, truck-mounted cleaning systems were reigning the world of carpet cleaning. During the 1980's, portable carpet cleaners were severely underpowered and led to increased moisture absorption inside the carpet without the requisite cleaning. Advancements were made and portable cleaner manufacturers started providing scrubbers in these machines to help loosen the soil.

Lakes Carpet Cleaning says, "These machines couldn't compete with powerful truck-mounted systems due to lack of water pressure." During the 1990's, portable machines started having internal heating elements and water pressures were significantly improved.

Currently, portable systems offer water pressure in excess of 500 psi enabling competition with large truck-mounted systems. Lakes Carpet Cleaning says, "Truck-mounted systems have several shortcomings due to their noisy operation and reliance on long water hoses."

Often only first floor properties can benefit from truck-mounted systems. Truck-mounted units burn gas and are not environmentally friendly. Lakes Carpet Cleaning always uses the best equipment and is pleased to

demonstrate their state-of-the-art cleaning operation.

Lakes Carpet Cleaning is busting cleaning myths with modern high-powered Portable carpet cleaning machines which rival the performance of old-style truck mounted cleaning systems, without burning fossil fuels. Lakes Carpet Cleaning makes efficient use of portable machines for better cleaning and customer satisfaction.
