

Solar Modular Builder Announces Impact Fund

June 17, 2019

June 17, 2019 - PRESSADVANTAGE -

GreenFeet, Inc., a Scottsdale, Arizona company, is disrupting the building and construction industry in a big way. The company is a prefab manufacturer of net-zero energy Microcities, urban infill and resort locations, solar home subdivisions, design/build modular construction services, urban farms, and underground clean energy power plants. They recently announced that they are providing investors the opportunity to invest into their fund: GreenFeet Impact Fund. The date for release of the fund will be announced within the month.

Rob Marker, CEO for GreenFeet says, "We are causing quite a stir in the development and construction industries with our patented designs, systems and our solar integration-and we like it that way. Our solutions are innovative to say the least. But above all, we are a purpose driven company with the goal of lowering the cost of living world-wide and providing a clean energy solution for every project we build." Marker says that accredited investors will soon have the opportunity to invest with GreenFeet, Inc.

Marker states that their designs are leading the way in the construction industry, encouraging other companies to come up with their own solutions for energy saving architecture. Buildings are created with steel frame interlocking systems, corelite modular panels, solar integration, and 100% smart technology abilities. He says that their vertical designs are factory built so they offer a higher level of efficiency than buildings built on-site. In addition, costs for prefabricated construction is much less, more than 30 percent

less in most cases, than onsite construction. Marker adds that the company's module-to-module connection enables them to complete every development project at least two times faster than traditional methods. The company's products are manufactured and assembled 97 percent offsite.

Marker says that those who are interested can visit the website to learn more about the company's innovative designs and solutions.

"And," says Marker, "Durability against natural disasters with GreenFeet products are unparalleled. Onsite construction cannot match it. We integrate 100 percent solar solutions in all of our designs for clean and renewable energy. And customers save up to 30 percent or more over the cost of traditional construction. And while we are making living more affordable, our communities are sexy, smart and luxe."

Marker says that with the cost of living going so high, particularly in certain states in the nation, there needs to be an effective way to lower these costs for consumers. He adds that with lower energy costs, consumers can have some breathing room with regards to monthly bills, and he says that given the cost of their homes is much lower than traditional building, consumers will find this a much more affordable way to live all around.

The company builds models to impact consumers and the planet, not just for the present but for many generations into the future. Marker states that they use only the highest quality materials, and design them so that they leave a lasting impression with a smaller carbon footprint, on future generations.

Those who are interested in learning more about the innovative home and building designs that are offered by GreenFeet, Inc. can visit the company on their official website to for more information. The website offers a look at a number of different floor plan designs as well as interior images of some of their previously built homes. Those interested in contacting the company can do so on the website, Facebook or directly by phone or email.
