

North Carolina Residents Eligible For Free Home Energy Audit From Greenserve

June 21, 2019

June 21, 2019 - PRESSADVANTAGE -

Salisbury, North Carolina based Greenserve is pleased to announce that they are offering free energy audits to homeowners of Salisbury, Charlotte, Winston-Salem, and the Whole Piedmont Triad, NC. The company also provides professional diagnostic and technical assistance with home performance issues concerning moisture, heat loss, and indoor air quality.

Greenserve is a full-service Waterproofing and Home Performance business that has been in operation since 2014. With over 25 years of combined experience, the company is one of the leading providers of custom waterproofing systems and building envelope solutions for new construction and retrofits of older homes and businesses in the greater NC area.

In line with our mission to provide the local community with homes that are healthier, more comfortable, and more energy efficient, we are pleased to announce that we are offering a free home energy audit to homeowners of Salisbury, Charlotte, Winston-Salem, and the Whole Piedmont Triad, NC. As a certified Building Performance Institute (BPI) company, we are trained and certified to conduct various tests, including blower-door tests, combustion appliance inspection and repair, air quality testing (including carbon monoxide

detection), duct testing, and airflow testing," says Garrett, a spokesperson for Greenserve. He also points out that, aside from their BPI certification, the company also holds various accreditations, including Grate Products Certified Healthy Basements Contractor, Building Performance Analyst Certification, EPA Lead-Safe Certification, and a North Carolina HVAC license. They are also a Duke Energy Smart Saver trade ally.

The company provides a wide range of professional services that consist of home energy solutions, waterproofing services, crawl space repair, mold control, and installation of solar panels. They also specialize in all types of insulation, ductwork, lighting, air sealing, sump pump installation, humidity control, and more.

Meanwhile, Garrett explains that heating and cooling make up the largest percentage of energy usage in a home, but it is not just the HVAC system that affects this number. Insulation, leaky ductwork, and air leakage also contribute to high energy consumption. This is why he also highlights the importance of conducting regular home energy audits to identify the root cause of the problems, asserting that, "You can significantly reduce your electric bill by simply having a regular HVAC system maintenance regime." A home with a fully functioning heating and cooling system consumes less energy, has a higher resale value, and has a lower negative impact on the environment.

In addition to HVAC services, Greenserve also offers a patented waterproofing system that is designed to permanently fix any water leakage problem. "Our patented waterproofing system involves the installation of a closed drain system that utilizes a vapor barrier on the basement walls that conducts the penetrating water into a sub-floor drainage system. The sub-floor drainage system collects the water into a sump pump tank and will then be pumped out away from the home. The result is a dry basement that is free from flooding, moisture, mold, and bad odor," says Garrett. The company additionally provides moisture control and waterproofing of crawl spaces, as well as effective and permanent solution to molds.

The company further encourages homeowners to invest in quality solar panels and harness the free energy from the sun. Garrett maintains that, "Solar panels aren't an expense because they are considered an investment that pays handsome returns, often rivaling those of more traditional investments such as stocks or bonds. Substantial savings, as well as the potential in some areas to generate revenue result in ROIs of 20% or more, making solar one of the best ways to invest your dollars."

Greenserve is considered one of the leading providers of home performance services in NC, as illustrated by the positive reviews and recommendations they receive from many of their previous clients. In fact, the company has an average rating of 4.8 in Google reviews.

Gordon Howe, one of their many satisfied clients, says, "We have requested estimates for attic insulation and a crawl space vapor barrier from three different companies, and Greenserve was in the middle. I talked

with Garrett and he helped me figure out a financially viable option, and I truly liked his approach and attention to detail. When the work was done, the team did a great job and I was very pleased with the whole experience from start to finish. I felt comfortable working with this company and I will definitely recommend them to my family and friends.?

Complete details can be found on the company?s website. Interested parties may also connect with Greenserve through their official Facebook page to learn more about their latest news and important announcements.
