

Tile Cleaning Salt Lake City Utah Company Explains How Tile Cleaning Increases Home Value

July 09, 2019

July 09, 2019 - PRESSADVANTAGE -

Mr. Chem-Dry, a tile cleaning Salt Lake City Utah service provider, has discussed the reasons for homeowners to invest in professional tile cleaning, particularly in enhancing the value of the home. According to them, dirty and stained tiles and grimy grout look unsightly and could make the house look old and dingy, thus reducing its value. Many homes in Salt Lake City have beautiful tiles, stones and grout on their exterior walkways, porches, as well as bathrooms, interior walls, and floors. However, a lot of dirt and grime can get accumulated on the tiles and grout and without regular deep cleaning, these will appear dirty and drab, which significantly lowers the value of the home.

“Tile can be a fantastic type of flooring to have within your home. The problem comes with a lack of maintenance,” says Daryl Olsen, president of Mr. Chem-Dry. He continues, “Without proper maintenance, you can end up dealing with all kinds of issues including grime buildup and stains. This will not only lead to unsightly flooring, but it can lead to health issues and more. That is why it is so important to invest in professional tile cleaning services.”

According to Daryl Olsen, there are a number of reasons why people may want to invest in professional tile

cleaning. These include polishing of the tile or stone in order to make it look like brand new; provision of proper protection for the tiles using a sealant that will protect them from exposure to dirt, grime and other things; the use of cleaning agents that will revitalize the tiles without risking further damage; the use of cleaning agents and equipment for the grout, bringing it back to its original color; prevention of mold growth; and being able to avoid the need to replace the tiles.

Mr. Chem-Dry also provides other services aside from tile cleaning. These include carpet cleaning, granite countertop restoration, green cleaning, pet urine removal treatment, rug cleaning, upholstery cleaning, and water damage cleanup. Carpet cleaning is important for homes and business establishments for health reasons and not just for aesthetic reasons. The company makes use of the Natural® Chem-Dry proprietary solution for deep down cleaning without the harsh chemicals and detergents found in other cleaning solutions. The company will also use 80 percent less water compared to standard cleaning processes. The result is that the carpets will be totally dry in as little as one to two hours, as compared to days when using other solutions.

Mr. Chem-Dry also offers granite countertop restoration services. While granite is very highly durable and will likely last for many years, over time, water spots can form and dirt, bacteria and residue can enter into the granite causing granite countertops to become unsightly. With the Chem-Dry solution, granite countertops will look just like they're brand new. Also, the cleaning solution used has no harsh chemicals and is environmentally friendly. A sealer will also be used, penetrating deep into the granite surface, thus providing a layer of protection to prevent the penetration of dirt, bacteria and residue into the granite surface.

The company specializes in green cleaning services, using the Natural® Chem-Dry solution, which does not contain soaps, detergents, organic solvents, enzymes, bleaches, optical brighteners, petroleum-based materials, fragrances, thickeners, artificial colors, plastics, polymers, phosphates and other chemicals that can contaminate the air, streams, lakes or forests.

Another important service provided by Mr. Chem-Dry is pet urine removal treatment. For those who have pets, the odor of pet urine can be on carpets, upholstery, chairs and various places in the home. The pungent odor is practically impossible to remove with the usual cleaning, rubbing, dousing, and soaking. The company uses a unique Hot Carbonated Extraction cleaning system where tiny bubbles permeate the affected area, lifting out the dirt, debris and odors. And because the system uses 80 percent less water, drying is much faster, compared to other cleaning systems.

Those who would like to learn more about tile cleaning and other services provided by Mr. Chem-Dry can visit their website or contact them on the phone or via email.
