
Multiplication Flash Cards Gaining Appreciation From Numerous Online Shoppers

December 28, 2015

December 28, 2015 -

Saratoga, FL - Simply Clever Cards has released an interactive tool esigned to act as a different kind of holiday gift. This resource is a pack of multiplication flash cards that are educational tools for children from kindergarten to primary school. The product is made exclusively available on the giant online shopping portal, Amazon. It has currently gained traction with numerous online shoppers expressing appreciation for the additional instruction it gives to children for learning mathematics.

The multiplication flash cards have attracted some 194 customer reviews as of December 2015. Of this number, 76% have been five star reviews. This large quantity of five star reviews shows the great appreciation that the online shoppers have for the flash cards. Five stars is the highest rating that any product can have on Amazon. It illustrates how well the customers gravitated towards the use of the flash cards and its many benefits.

Some reviews have spoken of the multiplication flash cards ability to encourage children to practice

arithmetic. Other reviews from online shoppers have discussed the colorful nature and durability of the cards.

One five star reviewer, Heidi mentioned, ?Great addition to all kids learning. They learn while playing card games! It is easy to read and use.?

Another five star reviewer, Steve, remarked, ?I got these for my son to help him with Math. He likes all the different colored cards. We were able to get him playing some different games right away and I really do think they will help improve his math skills over time.?

Even more customers stated how good the multiplication flash cards were at keeping children?s attention. For example, one five star reviewer said, ?I got these cards for my kindergartener daughter. We play games as suggested in the packages. We also make up our games to play the cards. We have fun doing it. She is learning adding, bigger and smaller numbers, and so on. We also count real things that match the numbers on the cards to add real learning experience with real things. For example, we put 2 beans on the #2 card and 3 beans on the #3 card. She learns addition by adding them together. She is creative with the different numbers and colors this set presents. She enjoys learning with this product.?

The multiplication flash cards can be a good way to turn long hours during the holiday season into fun and engaging times. It can be a fun time not only for children but the entire family. The company highlighted that the flash cards will be different from similar products on the market that tend to be boring and repetitive. This is because of the unique design of the multiplication flash cards.

The card deck comes with flash cards that are numbered zero to twelve in four different colors. The deck is also outfitted with four jokers. The variety in the colors and numbered cards causes a versatile play and enhanced educational activities.
