Diagnostic Center in Nicosia Cyprus Offers Diagnostic Services Like X-Rays and Ultrasounds

January 30, 2024

January 30, 2024 - PRESSADVANTAGE -

Promitheas Diagnostic Centre, a medical laboratory based in Nicosia, Cyprus, that aims to provide high quality health and biomedical services in Cyprus, is offering a range of diagnostic services, such as X-rays and ultrasounds. These include chest X-rays, abdominal X-rays, bone X-rays, mammograms, sinus X-rays, and spinal X-rays. The Promitheas Diagnostic Center also makes available a broad of range of ultrasounds, such as abdominal ultrasounds, pelvic ultrasounds, transvaginal ultrasounds, breast ultrasounds, thyroid ultrasounds, and musculoskeletal ultrasounds.

Dr Granitsas from Promitheas Diagnostic Centre says, ?X-rays are the most widespread medical imaging technique of internal areas of the body with X-rays. It is a painless and non-invasive procedure, which is completed within a few minutes. The radiology department of Nicosia Prometheus Diagnostic Center has modern and safe digital equipment, operated by a well-trained scientific staff with many years of experience, in order to offer the examinees high quality radiological services.?

X-rays are often done for a number of reasons. These include to: confirm the initial diagnosis; monitor the course of a diagnosed condition; thoroughly examine the part of the body with pain; and check the effectiveness of the medication prescribed.

Meanwhile, ultrasounds are one of the most dependable imaging tests in modern medicine. Ultrasound imaging is a harmless, painless, and completely safe procedure, which can be done in just a few minutes. The ultrasound department of the Promitheas Diagnostic Centre in Nicosia is equipped with state-of-the-art ultrasound equipment and well-trained scientific staff with several years of experience, to provides patients with high quality medical services.

Patients can either come with a Cyprus General Healthcare System (GHS) referral or take advantage of the preferential rates offered by Promitheas Diagnostic Centre for the uninsured. The upper abdominal ultrasounds include the pancreas, liver, spleen, gallbladder and bile ducts, kidneys, and the anatomical area of the adrenal glands, paraortic spaces, and abdominal aorta. The lower abdominal ultrasounds in women include the uterus, ovaries, and bladder. In men, the bladder, seminal vesicles, and prostate are checked. With this examination, parts of the gastrointestinal tract are also investigated to check for diseases like appendicitis, ileus, diverticulitis, etc.

The thyroid ultrasound is used to check for any changes in the size of the thyroid, including nodules, particularly in people with thyroid disease. The intravaginal ultrasounds in women will include digital imaging of the endometrium. This is a kind of pelvic ultrasound that checks the ovaries and uterus for cysts, polycystic ovaries, ectopic pregnancy, fibroids, pregnancy, polyps, endometrial thickening, pelvic infection, cancer in the uterus or ovaries, and tubal enlargement.

The breast ultrasound is used to examine suspicious findings. In women who have dense breasts or those who have a family history of breast cancer, the breast ultrasound is performed with mammography. For men, testicular ultrasounds are used to detect the presence of inflammations or varicocele, or growths, which are linked to infertility.

Cervical ultrasounds of the parotid and submandibular salivary glands are used to check for swollen lymph nodes in the area and any palpable growths, lithiasis or inflammations that may cause obstruction. For men, the prostate ultrasound is used to check for possible malignancy or inflammation in the prostate gland.

Ultrasound imaging of the musculoskeletal system is done on patients suffering from joint pain and for diagnosing injuries to the joints and musculoskeletal system. It may also be used as a general check of the functionality of joints like the ankle, elbows, shoulder, etc. And finally, soft tissue ultrasound may be performed to look for palpable lumps or lipomas in any part of the body.

The Promitheas Diagnostic Centre is a diagnostic centre that is certified based on the international standard ISO 9001. It has a team of reputable biochemists who have a long experience and scientific training. They employ state-of-the-art systems in the field of medical laboratory tests, with automated methods and digital data processing, in order to provide dependable results as quickly as possible.
