

Dental Guide Australia Launches Website to Educate Australians on Dental and Orthodontic Issues

July 31, 2015

July 31, 2015 - PRESSADVANTAGE -

SYDNEY, Australia ? Dental Guide Australia launched its website today, offering Australians free, online access to in-depth information about dental and orthodontic procedures, treatment choices and costs. With the goal of helping Australians save money and choose wisely for dental care, the site offers pages that discuss the hows and whys of dental implants, root canal, braces and invisalign, wisdom teeth, veneers and dental insurance. The site is now also publishing extensive research on ?Dental Tourism? and some comparative pricing for having dental care performed in other countries, such as Thailand.

?People tend to think of dentistry as a known quantity ? if you?ve been to one dentist, you?ve been to them all,? said Alex Azoury of Dental Guide Australia. ?But, the reality is that the professional is incredibly diverse and there is a huge range of options for Australians. There are new treatments coming online all the time and new venues, such as Thailand, where you can get world-class dental care for a fraction of the cost of doing it here.?

Dental Guide Australia?s aim is to educate the Australian dental consumer. For example, with dental implants, the site goes through the subject in full, showing the visitor how dental implants work, the different

types of implants and why one might choose one option over another. It covers potential problems that can arise with the treatment approach as well. The dental implants page then provides comparative cost information for different dental implant procedures. The price of having dental implants done in Thailand is included so consumers can assess potential savings through the dental tourism process.
