

Bella Restoration Baltimore Removes Asbestos in Winter Months

December 16, 2020

December 16, 2020 - PRESSADVANTAGE -

Winter is here and as the temperatures fall, there are certain risks that are bound to pop up for home and business owners that one might never expect. One of those risks is asbestos exposure. Asbestos is a common insulating material that is found in older buildings, and it can be dangerous when it becomes exposed to air. With temperatures dropping, buildings are at risk of experiencing frozen pipes. Frozen pipes lead to pipe bursts, and pipe bursts can lead to the damage of asbestos containing materials in a building, such as tiles, ceilings, walls, and flooring. When these asbestos fibers become exposed to the air, it can lead to severe health risks for anyone who breathes in the fibers.

That's why it's important to get rid of asbestos in winter if one wants to ensure the safety and well being of the people who regularly use a home or business. Bella Restoration Baltimore is a professional restoration company that can perform asbestos removal and asbestos abatement so homeowners don't have to worry about the people in their building being exposed to asbestos fibers in the case of their building sustaining damage.

Local Restoration Company Removes Asbestos this Winter in the Baltimore Area

"Some homeowners believe they should wait until the summer to get rid of asbestos in their building," says Chuck Cox, owner of Bella Restoration Baltimore. "But the best time to get rid of asbestos in a home is as soon as possible, and the winter time is a great time to do so because of the heightened risk of asbestos exposure that can be caused by burst pipes."

There's no time to wait when it comes to removal of asbestos in winter. If the building is older and the owner suspects it may contain asbestos, it's a good idea to hire a professional company to perform asbestos removal or asbestos abatement to keep the home or business safe. Asbestos removal can be a very dangerous job to take on without assistance, so professional help is recommended if one wants the job to get

done safely and effectively.

Safety and Removing Asbestos in Winter

A common misconception is that colder temps in the winter time can complicate the asbestos removal process, but a professional restoration company can perform asbestos removal in winter and any other time of the year. If anything, removing asbestos in winter is more important due to the higher risk of damage to a building from potential pipe bursts caused by freezing. In older homes, asbestos was commonly used as an insulator, as well as in fireproofing, strengthening agents in plastics and cement, vinyl tile floors, pipe coverings, popcorn ceilings, roof tiles, and certain kinds of drywall. However, it can have negative effects on a person's health. Asbestos fibers can break down to small particles and become airborne, and if inhaled, it can remain in someone's lungs. What's worse is that it can lead to serious diseases like: Small pleural effusions or collection of fluid around the lungs, Lung cancer, Mesothelioma which is a rare cancer on the abdominal linings and chest, Asbestosis that can lead to permanent damage to a person's lungs or scarring a tissue in the lung, Pleural plaques which can create scarring in the lining of the lungs, Other cancers like those of oropharynx, larynx, kidney, and gastrointestinal tract.

If not given immediate attention, asbestos exposure can worsen someone's health as well as their family's. Ensuring health and safety can be done by seeking the help of an asbestos removal or asbestos abatement company. Either option will go a long way when it comes to protecting people in buildings from asbestos in winter.

Bella Restoration Baltimore Provides Removal and Abatement of Asbestos in Winter

Homeowners looking for a company that can remove asbestos in winter can benefit from calling Bella Restoration Baltimore. They have provided asbestos removal and abatement for the Baltimore community for years. They pride themselves on offering services that prioritize safety and getting the job done right the first time. It's extremely important that a homeowner remediates the threat of asbestos getting exposed to the air in their home or business. And since the winter time offers a greater risk than normal, it's important to make sure any risk of asbestos exposure is dealt with sooner rather than later. The asbestos removal process can be very dangerous to attempt without professional help because of all the proper steps and safety equipment that will be needed in order to do the job without significant risk. Hiring a professional company ensures peace of mind in knowing the people who use the building every day will be safe from the threat of asbestos exposure.
