

Daylight AG Unveils Revolutionary School Software Transforming Administration Tasks

July 15, 2025

Winterthur, ZH - July 15, 2025 -
Daylight AG has just launched its new software tailored for schools, aiming to improve how they handle both administrative and academic tasks. This software suite is designed to help with various school operations like managing administration, course materials, exams, event planning, and financial tasks. With this launch, Daylight AG is addressing the diverse needs of schools as they navigate an increasingly digital environment.

The suite is packed with modules that make different school operations more efficient. At its heart is a strong administration system that helps manage student records, class schedules, and grading. For more precise financial management, the software seamlessly includes accounting tools that support budgeting, expense tracking, and financial reports. These features help schools get a clear picture of their financial standing, aiding decision-making.

Teachers will find the course management tools useful as they offer a well-organized way to assemble and share curriculum materials. This part of the software makes lesson planning and teaching easier, letting

educators focus on engaging with students instead of getting caught up in admin work. When it comes to exams, the software streamlines grading and compiling results, cutting down on errors and saving time. More information on managing educational programs and events is available on the company's website.

For organizing events, there's a module that covers everything from parent-teacher meetings to student activities. It includes easy-to-use scheduling tools so staff can manage things like booking venues and allocating resources, ensuring that events go off without a hitch.

"Our main aim is to ease the everyday workload for school staff," said the CEO of Daylight AG. "We aim to better the learning environment by reducing the usual administrative burden."

Understanding that school staff come with varying levels of tech skills, Daylight AG has designed the software to be user-friendly. This ensures that everyone, from tech experts to novices, can use the system without trouble. The software is easy to implement, requiring minimal training, so schools can adopt it smoothly.

"We worked closely with teachers and school leaders during development," shared a Daylight AG product manager. "Their feedback was crucial in creating a system that meets their needs and more."

Daylight AG also emphasizes its commitment to customer service, offering ongoing support and updates. This ensures that the software evolves along with the latest changes and demands in education. Schools can depend on Daylight AG for support as they integrate and use the new system.

For those interested in seeing the software in action, Daylight AG is offering a live demo, available at this link: https://maps.app.goo.gl/FYDvnuHbdtTgjGRaA. This will give potential users a closer look at how the software boosts school performance and efficiency.

With this new release, Daylight AG confirms its dedication to helping schools. By offering flexible and effective solutions, the company aims to better both administrative and academic processes, ultimately benefiting everyone in the school environment. As Daylight AG continues to push forward with innovations, schools will find valuable opportunities to grow and improve through these technological tools.
