

Concrete Contractor San Jose CA Announces the Launch of Its New & Improved Website

July 06, 2021

July 06, 2021 - PRESSADVANTAGE -

San Jose Concrete Solutions strives to be as progressive and customer-oriented as possible when it comes to its professional concrete service offerings. A good example of that is the company just recently launched a new website. This website is designed in a way that will make it easier than ever before for its customers to get the important information that they need on this concrete contractor's services. That way the company's customers can spend their valuable time making informed concrete service decisions instead of spending time navigating around an older style website.

A company spokesperson talked more about this by saying that making the new website as user-friendly as possible was definitely their main focus when creating it. That took the combined efforts of their staff which represents many years in the concrete service industry and a talented IT services provider that was innovative and experienced. He stated that those at their company and customers that have used the new website have been very satisfied with how easy the new website is to navigate around. A simplified dropdown menu was a big key here along with less text on the pages to be read and a background color selection that makes that text stand out. Customers can also refer to the new website to see many high-resolution photos of San Jose Concrete Solutions' finished projects.

The company spokesperson added that one of the best traits about the new website is the way that it presents the important information on the company that their customers are looking for. The descriptions of their services have remained informative but have also been purposely made more concise to cut down on user reading time. This new website goes into nice detail about such commercial and residential concrete projects that they offer as their patio and driveway work. These are two jobs that can significantly enhance the looks of the front and back of any property. He says that their customers can also have these projects done up traditionally or choose more decorative stamped concrete options. The website also goes over how they are used by many area construction companies to help shape and pour foundations that are formed to exacting standards. Other concrete specialties that are highlighted in the new website include their swimming pool concrete deck projects. This includes the installation of concrete pool decks for newly constructed pools and the restoration of existing swimming pool decks. The company spokesperson says the new website also goes over how they can handle all shapes and sizes of concrete walkway projects. This new website can be viewed here at <https://www.sanjoseconcretesolutions.com>.

Those in the San Jose area that have used this concrete contractor's services have reviewed them very favorably. These 5-star reviews taken from their Google Maps Business Listing are examples of that. Niklas Moller stated, "I had received quotes from 4 other concrete companies in San Jose and Concrete Solutions had good pricing plus they were easy to deal with throughout the entire process. They poured me a new concrete patio that looks amazing. Thanks, guys." Donald Clark wrote, "Concrete Solutions removed my old patio and installed a new stamped concrete one in its place. I gave them an idea of what I was looking for and they helped me piece it together. They delivered an awesome product that we will enjoy entertaining on for years to come."

The company spokesperson added that their reputation is not the only reason that area home and business owners should be interested in their concrete work. Also factored into this should be the expertise that the company brings to its professional concrete work. That includes both the design and implementation phases of their concrete specialties. He added that they are also fully licensed and insured and stand behind all of the concrete work that they do. San Jose home and business owners that would like more information on the concrete services that this company offers can call them, send them an email, or refer to their newly launched website.
