

Microsurgical Vasectomy Reversals by Dr. Mark Hickman Expands Services to Meet Growing Demand

October 09, 2025

New Braunfels, TX - October 09, 2025 -
Microsurgical Vasectomy Reversals by Dr. Mark Hickman announces expanded service offerings to accommodate increasing numbers of men seeking to reverse vasectomy procedures. The New Braunfels-based practice has enhanced its microsurgical capabilities and streamlined patient care protocols to serve patients from across Texas, Louisiana, Oklahoma, and throughout the United States.

The expansion comes as more men nationwide explore family planning options following previous vasectomy procedures. Dr. Mark Hickman, who has performed thousands of successful vasectomy reversals over his 26-year career, has refined his microsurgical techniques to achieve higher success rates through precise vas deferens repair using advanced operating microscopes and specialized suturing methods.

"The decision to reverse a vasectomy represents a significant life change for many men and their partners," said Dr. Mark Hickman, microsurgical surgeon. "Our expanded services ensure that patients receive comprehensive care through every step of the process, from initial consultation through post-operative

recovery, while maintaining the affordability that has made these procedures accessible to more families."

The practice offers two comprehensive surgical options to accommodate different patient needs and preferences. The first option includes local anesthesia with oral sedation, while the second features IV sedation administered by a board-certified anesthesiologist. Both options include all surgical fees, facility costs, and follow-up care in a single transparent price structure.

Patients traveling from outside the immediate area benefit from coordinated care arrangements, including assistance with scheduling and information about local accommodations. The practice has established relationships with area hotels to facilitate convenient stays for out-of-town patients and their families during the procedure and recovery period.

The microsurgical technique employed at the practice involves meticulous repair of the vas deferens using powerful magnification and ultra-fine sutures. This approach creates precise alignment of the vas ends and ensures a watertight closure, factors that contribute to improved surgical outcomes and higher pregnancy rates following the procedure.

Dr. Hickman's practice maintains comprehensive patient education resources, including detailed procedure information, frequently asked questions, and patient testimonials. These resources help prospective patients understand the surgical process, recovery expectations, and potential outcomes based on the experiences of previous patients who have successfully undergone the procedure.

The expansion of services reflects growing awareness about vasectomy reversal options among men who have undergone sterilization procedures. Changes in personal circumstances, remarriage, or evolving family planning goals often prompt men to explore reversal options years after their initial vasectomy.

Microsurgical Vasectomy Reversals by Dr. Mark Hickman specializes exclusively in vasectomy reversal procedures, utilizing advanced microsurgical techniques to restore male fertility. The practice, based in New Braunfels, Texas, serves patients throughout the southwestern United States and beyond, providing specialized surgical care for men seeking to restore their fertility following vasectomy. With over two decades of specialized experience and thousands of successful procedures completed, the practice has established itself as a dedicated center for microsurgical vasectomy reversal surgery.
