

Mindmachines.com Announces Advanced Perk Performance Technology in ROSHIWave Mind Machine

November 05, 2025

Dallas, Texas - November 05, 2025 -
Mindmachines.com announces enhanced capabilities in its ROSHIWave IN-SIGHT Mind Machine, featuring advanced brainwave disentrainment protocols designed to help users achieve deeper meditative states and enhanced mental performance. The device utilizes proprietary perk performance technology to guide users toward normalized brainwave patterns typically associated with experienced meditation practitioners.

The ROSHIWave represents a significant advancement in brainwave optimization technology, employing a process called Dynamic Neuro-Activation through calibrated light patterns delivered via specialized RGB LED glasses. This approach dis-entrains repetitive mental patterns, allowing the brain to normalize its activity naturally without requiring conscious effort or prior meditation experience.

"The ROSHIWave technology addresses the growing need for accessible mental wellness tools that deliver measurable results," said Fred Williams, Director of Product Development at Mindmachines.com. "Users consistently report achieving meditative states comparable to those reached by experienced practitioners

after years of training, but in sessions as brief as 15 minutes."

The device operates through what the company describes as an Error-Correction System for the Brain, utilizing photostimulation to influence brainwave frequencies. The enhanced ROSHIWave includes all classic ROSHI-style protocols that have undergone extensive research, plus newly developed multiplexed versions that expand functionality across various applications including stress management, accelerated learning capabilities, and behavioral modification.

Users can modify the color output of the glasses through simple button controls, enabling one pair of glasses to emulate the entire range of original pROSHI neurodynamic activator glass configurations. The pocket-sized device features USB rechargeability and operates with an interface similar to a click-wheel mp3 player, making it accessible for both clinical and personal use.

The technology has gained traction among nearly 100 clinicians worldwide who utilize the device as a replacement for classic ROSHI devices that are no longer available. The ROSHIWave IN-SIGHT package includes the console unit, color-changing RGB RoshiGlasses, a color-changing RGB Ganzfeld RoshiVisor, USB charger and cable, and a carrying case.

The mind machine market has experienced increased interest as individuals seek technology-assisted approaches to mental wellness and performance enhancement. The ROSHIWave addresses this demand by providing a non-invasive method for achieving altered states of consciousness and ganzfeld effects that support inner peace, personal wellness, and improved sleep quality.

Mindmachines.com emphasizes that the ROSHIWave functions as a wellness tool for general stress management and cognitive enhancement rather than a medical device. The company notes that individuals with seizure disorders should not use the device.

Mindmachines.com is an online distributor of brain machines, brainwave entrainment technology, AVS stimulation devices, EEG neurofeedback equipment, mind machines and meditation machines. The company also serves as the worldwide distributor of the ROSHIWave self meditation device. Based in Dallas, Texas, and operated by Av3X LLC, Mindmachines.com specializes in brainwave entrainment technologies designed to enhance mental performance, wellness, and personal achievement.
