RadioMobile Awarded Sourcewell Cooperative Contract for Public Safety Communication Technology and Hardware Solutions

November 25, 2025

SAN DIEGO, CA - November 25, 2025 - PRESSADVANTAGE -

RadioMobile, a leading provider of mission-ready data communications technology for Fire & EMS announced today that it has been awarded a national Sourcewell contract for Public Safety Communications Technology and Hardware Solutions. RadioMobile secured the Sourcewell contract following Sourcewell?s rigorous request for proposal process, ensuring compliance with local procurement requirements with the goal of delivering exceptional value and service to end users. This partnership grants any public agency access to purchase from RadioMobile through a ready-to-use, Sourcewell-vetted contract, streamlining the public purchasing process.

The Public Safety Communications Technology and Hardware Solutions contract (RFP 020625) offers public agencies access to communications technology and hardware such as fire station alerting, connectivity and interoperability devices like Mobile Data Computers (MCTs), hardware, as well as wireless network connectivity options including 4G/5G cellular and broadband satellite. In addition to hardware, RadioMobile provides a full suite of services including installation, training, maintenance, system integration, support, and customization. This end-to-end approach ensures that agencies not only acquire the right tools but also

deploy them effectively to maximize operational impact.

At the heart of RadioMobile?s offering is its fire station alerting (FSA) technology, a mission-critical solution designed to ensure rapid, reliable, and coordinated response for fire and emergency services. Fire station alerting systems are essential for reducing turnout times, improving situational awareness, and ensuring that first responders receive clear, timely information when seconds matter most. By integrating seamlessly with dispatch systems, RadioMobile?s FSA solutions deliver audible, visual, and digital alerts that cut through the noise of busy stations and provide firefighters with immediate, actionable information.

Jim Moore, CEO at RadioMobile, emphasized the importance of cooperative purchasing in accelerating the adoption of life-saving technologies: ?By utilizing a cooperative contract, Fire & EMS agencies can acquire the latest technology they need to be effective -- faster and at a lower cost. This not only improves the health, safety, and well-being of our communities but also ensures that our first responders have the best tools available to perform their duties."

RadioMobile?s fire station alerting systems stand out for their adaptability and resilience. Whether deployed in urban, suburban, or rural environments, these systems are engineered to integrate with legacy infrastructure while extending coverage through modern broadband and satellite connectivity. This ensures that even agencies operating in remote or disaster-affected areas can maintain reliable communication and alerting capabilities. Features such as zoned alerting, automated dispatch integration, and customizable notification options allow departments to tailor the system to their unique operational needs, reducing confusion and enhancing response efficiency.

Sourcewell, a self-funded governmental organization established in 1978, facilitates cooperative purchasing programs that harness the collective buying power of more than 50,000 participating agencies. By offering pre-negotiated, competitive contracts, Sourcewell enables government, educational, and nonprofit organizations to secure cost-effective solutions without sacrificing quality or compliance. RadioMobile?s inclusion in this program underscores its commitment to delivering exceptional value and service to public safety agencies nationwide.

With this contract, agencies across the country can now leverage RadioMobile?s expertise to modernize their communication infrastructure, strengthen interoperability, and deploy advanced fire station alerting systems that directly support their mission to save lives. By combining innovative technology with streamlined procurement, RadioMobile and Sourcewell are helping to ensure that first responders are equipped with the tools they need to respond quickly, effectively, and safely.

For more information on how to leverage the Sourcewell national cooperative contract awarded to RadioMobile for data communications and fire station alerting needs, visit RadioMobile?s Sourcewell page.

About RadioMobile

RadioMobile creates customizable hardware and software tools that help public safety agencies save lives by operating more safely and effectively. RadioMobile builds fully customized, end-to-end information tools that seamlessly integrate with legacy systems, extending resilient coverage to urban, suburban and rural environments. RadioMobile's extensive product line spans mobile computer terminals (MCT) including mobile data computers (MDC) and tablets, mobile data networking, incident and AVL software, and fire station alerting (FSA) systems as well as integration and installation services.
