Ferrell Electric Inc. Addresses Rising Need for Electrical Panel Upgrades Amid Home Technology Advancements

January 27, 2026

MARTINEZ, GA - January 27, 2026 -

Ferrell Electric Inc., a family-owned electrical services provider based in Martinez, GA, responds to the increasing demand for electrical panel upgrades as homeowners integrate more energy-demanding systems into their properties. With over 33 years of experience, the company handles upgrades to outdated electrical panels to support modern requirements, including installations for electric vehicle chargers and whole-house generators. This focus comes as residential electrical needs evolve, driven by advancements in home automation and energy efficiency measures.

Electrical panels serve as the central hub for a home's power distribution, managing circuits and ensuring safe electricity flow throughout the property. In older homes, panels installed decades ago often lack the capacity to handle contemporary loads from appliances, lighting systems, and emerging technologies. Ferrell Electric Inc. performs these upgrades by replacing fuse boxes or undersized panels with modern circuit breaker systems that comply with the National Electrical Code. The process involves assessing the existing setup, installing new panels with adequate amperage, and testing for proper function to prevent overloads or hazards.

The company's services extend beyond basic repairs to include comprehensive solutions for both residential and commercial clients. For instance, Ferrell Electric Inc. installs carbon monoxide detectors, ceiling fans, and electrical outlets as part of its home electrical offerings. In new construction projects, the team designs and implements complete electrical systems, coordinating with builders to place outlets, circuits, and lighting fixtures according to building plans. Commercial work similarly emphasizes code compliance and efficient installations for new builds, where electrical layouts are planned to support business operations without disruptions.

As energy costs rise, Ferrell Electric Inc. incorporates efficiency-focused upgrades during panel work. This includes integrating LED lighting, smart controls, and timers that help reduce consumption in older structures. The company's approach ensures that upgrades not only meet immediate needs but also prepare homes for future expansions, such as adding smart home features like automated thermostats or security systems. By addressing these elements, Ferrell Electric Inc. helps maintain safe and reliable electrical infrastructure in the communities it serves.

"Homeowners today face higher electrical demands from devices like EV chargers and backup generators, which can strain outdated panels," said Adam Dietrich, President of Ferrell Electric Inc. "Upgrading the electrical panel provides a foundation for safe power management and can contribute to long-term energy savings through better system efficiency."

Ferrell Electric Inc. maintains a team of licensed, insured, and trained professionals who adhere to Georgia building codes. The company offers upfront pricing with no hidden fees and provides a one-year warranty on parts and labor for all services. Operating in areas including Augusta, Evans, Grovetown, North Augusta, and South Carolina, the firm handles projects of varying scales, from minor repairs to full-system installations in industrial settings. Recent work has included post-storm restorations, such as reinstalling outdoor lighting fixtures damaged by severe weather events.

In addition to electrical panel upgrades in Martinez, GA, Ferrell Electric Inc. specializes in indoor lighting installations, working with design specialists to select and install fixtures that enhance home aesthetics and functionality. The company's commitment to quality extends to its drug-free workforce and emphasis on courteous service, treating each property with respect during visits. This dedication has built a reputation for reliability in the region over more than three decades.

Ferrell Electric Inc. also supports commercial new construction by collaborating with contractors to develop electrical plans that ensure safety and operational efficiency. For residential clients, the firm provides rewiring services to update aging systems, reducing risks associated with faulty wiring. These efforts align with industry standards, promoting compliance and preventing common issues like circuit overloads.

"Ensuring that electrical systems are up to code is essential for protecting families and properties," said Adam Dietrich, President of Ferrell Electric Inc. "Our team focuses on thorough assessments and precise installations to deliver lasting results."

Established in 1992, Ferrell Electric Inc. has grown from a local operation to a trusted provider of electrical services across the Central Savannah River Area. As a fully licensed entity with number EN213209, the company prioritizes workmanship guarantees and customer satisfaction through skilled execution. Ferrell Electric Inc. continues to serve residential and commercial needs with a focus on safety, efficiency, and adherence to regulatory requirements.
