

Hayden Hess Of Industrial Plastic Supply Announces Expanded Inventory Of Plastic Sheet Materials

April 23, 2015

April 23, 2015 -

Hayden Hess, spokesman for Industrial Plastic Supply Inc., has announced that his company has an expanded inventory of Plastic Sheet materials for industrial use. The company is a major supplier of plastic sheets, rods, and tubes for various industrial purposes and now has in stock more than 40 types of plastic sheet materials to meet nearly every industrial need.

He points out that because plastic sheets are extremely versatile it can at times be difficult for managers to determine exactly what they need for their business. There are many things that need to be considered when choosing the right materials for a specific project.

Before making a decision, the buyer must know the temperature, strength, and the kind of elements the plastic will be exposed to in order to choose the best material to work well in their specific circumstances. Plastic experts say that these are critical components to the success and longevity of any project that must rely on the durability of their plastic materials.

With so many different types of Plastic Sheet to choose from the industrial buyer needs to also understand

the specific function the material needs to perform in order to choose properly. Some plastics materials are very resistant to chemicals, while others are not. They point out as an example that Delrin Sheet (a brand name for Dupont) and Nylon have mild resistance to some chemicals while other plastics like HDPE sheet and Ultem work well in chemical applications. The Delrin (or Acetal) and Nylon do work well with machinery and have withstand high resistance to impact strength.

Industrial Plastic Supply representatives stress the importance of matching the right plastic to the right conditions for a successful result. That's why they maintain an inventory of more than 40 different types of plastics that are suited for almost every possible situation. They recognize that providing industrial companies with access to a wider variety of options means that they can readily meet their specific needs.

Hayden also points out that it is not enough to have a large selection of plastics but that these types of Sheet Plastic may have to endure a lot of pressure in certain circumstances. That's why Industrial Plastic Supply also has them in a variety of thicknesses, some up to 8" thick, so that they can handle just about any circumstance.

It is not enough for a company to know that they need plastic for a project or to complete a specific task, they must also realize that not all plastics are the same. What may work for one specific project may not be adaptable to another. For those companies that may be unsure of the right type of plastic to choose, it may be best to consult with a plastic expert to help analyze the exact needs of the job to make sure that they make the best selection.
