QC Fence Contractors Announces Industrial Fence Installation Expansion

March 20, 2026

March 20, 2026 -
QC Fence Contractors announced on March 19, 2026, the expansion of its service line to include industrial fence installation, adding to its existing fencing operations based in Charlotte, North Carolina. The development reflects increased demand for perimeter control and defined site boundaries across commercial and industrial properties. ?This addition reflects an operational step to address project requirements that involve larger sites and specialized materials,? said Troy Hawkins, company representative at QC Fence Contractors.

QC Fence Contractors operates from its office at 13534 Plaza Rd Extension Suite 5028 and provides fencing services for residential and commercial applications. The company has incorporated industrial fence installation into its service scope to address the needs of facilities such as warehouses, distribution centers, and manufacturing sites. Industrial fencing projects typically involve materials such as chain link, steel, and reinforced panels configured to align with project specifications and site conditions.

The company states that each installation begins with a consultation and site survey process that documents measurements, terrain conditions, and access requirements. This step establishes baseline data that informs layout decisions and material selection for each project. The survey process also identifies factors such as elevation changes, drainage considerations, and existing structures that may affect installation.

Following the initial assessment, QC Fence Contractors develops a design and planning framework that outlines fence placement, gate access points, and structural components. The design process aligns with functional requirements such as controlled entry, boundary definition, and compliance with applicable property standards. Documentation generated during this phase supports coordination between property managers, contractors, and installation teams.

The installation phase involves preparation of the site, placement of posts, and assembly of fencing materials

according to the approved design. The company reports that installation crews follow standardized procedures to maintain alignment, spacing, and structural consistency across the project area. Equipment and materials are selected based on project scope and environmental exposure factors.

QC Fence Contractors indicates that industrial fencing projects vary in scale and configuration depending on the intended use of the property. Some installations include perimeter enclosures for storage yards, while others involve segmented fencing to define operational zones within a facility. Gate systems and access control points are incorporated where required to support site operations and traffic flow.

The company also provides repair and modification services for existing fencing systems, which may include panel replacement, post reinforcement, and adjustments to gate mechanisms. These services are integrated with the broader installation offering to support properties undergoing expansion or reconfiguration. The addition of industrial fencing extends these operational capabilities.

QC Fence Contractors maintains an online presence where project information and service details are published. Additional information about the expanded services can be found on the QC Fence Contractors website.

The company reports that this service expansion aligns with ongoing construction and infrastructure activity observed across multiple sectors. Industrial properties continue to require defined boundaries and controlled access as part of site planning and operational management. QC Fence Contractors states that it will continue to monitor project requirements and adjust service offerings accordingly.

QC Fence Contractors can be contacted by phone at +1 704-486-2731 for general inquiries regarding its services. The company notes that further updates related to its operations and project capabilities will be made available through its official channels. The addition of industrial fence installation represents a documented change in service scope as of March 2026.
