DuraShield Roofing & Contracting Details DaVinci Slate Roofing Specifications for Property Owners

March 24, 2026

NEENAH, WI - March 24, 2026 -
DuraShield Roofing & Contracting details DaVinci slate roofing as a synthetic product option within its residential and commercial roofing services. The company describes the material as a composite alternative manufactured by DaVinci Roofscapes for property owners considering different roofing systems.

DaVinci slate roofing in Appleton is produced from virgin polymer resins reinforced with ultraviolet inhibitors and fire retardants. The resulting tiles replicate the appearance of natural slate while providing a lighter-weight construction. An interlocking design forms part of the system and supports the installation process on suitable roof structures.

The material features a Class A fire rating and withstands wind speeds up to 110 miles per hour. It is engineered to resist hail, heavy snow loads, and extreme temperature changes. The composite composition also prevents moisture absorption, rot, and decay that can occur with other materials.

DaVinci slate roofing requires minimal ongoing attention. Periodic sealing is not necessary, and routine cleaning can be accomplished with soap and water. Color and texture stability are built into the design, so the

appearance holds over time. The tiles are made from recyclable materials and do not incorporate petroleum-based components.

Anthony Walsh, Owner of DuraShield Roofing & Contracting, stated, "DaVinci slate roofing gives property owners a synthetic choice that combines visual appeal with practical characteristics suited to various building types."

The lightweight tiles reduce structural demands compared to natural slate. This aspect often means no additional reinforcement is needed for the existing roof frame. Installation uses standard professional techniques and can be completed in a timeframe that depends on roof size and conditions.

DuraShield Roofing & Contracting also offers natural slate for clients who select the traditional material. Each project receives an individual evaluation to match the system to the structure and performance expectations. The full lineup includes asphalt shingles, cedar shakes, metal roofing, tile, and custom copper applications, along with flat roof membranes such as TPO and EPDM.

Walsh added, "We review the specifications of DaVinci slate roofing with clients alongside other selections so decisions align with their particular project requirements."

Roof inspections serve as the standard starting point before any work begins. Emergency response services operate around the clock to address storm damage and immediate needs. The contractor assists with insurance documentation when damage qualifies for coverage and provides financing arrangements that fit different timelines.

Work covers single-family residences, apartment complexes, condo associations, office buildings, and hotels. Uniform application standards apply regardless of building category, with attention given to proper ventilation and underlayment. DaVinci slate roofing tiles are available in flat, Spanish, European, and New World profiles with a range of colors and textures.

The contractor notes that DaVinci slate roofing can integrate with solar panel systems for clients pursuing energy upgrades. The stable surface supports solar installations without compromising the roof's integrity. This feature expands options for properties moving toward combined roofing and renewable energy solutions.

DuraShield Roofing & Contracting holds Wisconsin license number 1024749 and maintains an A-plus rating with the Better Business Bureau. All products come from domestic manufacturers. The organization has operated since 2003 and handles both scheduled replacements and urgent repairs across its service territory.

The installation timeframe for DaVinci slate roofing typically spans several days to a few weeks based on project scope. DuraShield teams complete every phase according to the manufacturer's instructions. Consultations allow property owners to assess current roof conditions and explore available materials, including this synthetic slate option.

DuraShield Roofing & Contracting was founded in 2003 by Anthony Walsh. The business has developed into a full-service roofing contractor for residential, commercial, and multi-family properties, with locations in Appleton, Barrington, Madison, and Milwaukee. It installs systems from leading United States manufacturers and upholds consistent workmanship across all project scales
