Ferrell Electric Provides Residential Electrician Services in Georgia and South Carolina

April 16, 2026

MARTINEZ, GA - April 16, 2026 -
Ferrell Electric provides residential electrician services to homeowners in Georgia and South Carolina. The company, which began operations in 1992, performs licensed electrical work that meets applicable building codes and National Electrical Code standards in both states. This includes new construction for residential buildings as well as work on existing homes.

During residential new construction, electricians draw and install the whole electrical system from the ground up. They work with contractors and homeowners to plan outlet placement, circuits, lighting, appliance hookups, and other electrical elements. The process ensures the new build operates in a code-compliant manner.

For existing homes, the company handles electrical repairs, rewiring, and panel upgrades. It also performs circuit breaker installation when circuits trip repeatedly. Indoor lighting installations and fixture upgrades take place in both new and older homes. This involves installing new wiring or upgrading existing electrical work while remaining code-compliant. A design specialist at the lighting showroom assists with fixture selection where applicable.

Additional services include carbon monoxide detector installations, ceiling fan installations, electrical outlet installations, and whole-house generator installation and repair. Ferrell Electric electricians complete these tasks in accordance with established standards. The company obtains required permits for most electrical projects as part of its standard procedure while maintaining compliance with applicable standards in Georgia and South Carolina.

Service extends to multiple communities in Georgia, including Appling, Augusta, Evans, Grovetown, Harlem, Hephzibah, and Martinez, as well as to Aiken, Belvedere, Burnettown, Edgefield, Gloverville, Langley, North Augusta, and Trenton in South Carolina. This coverage supports residential electrician services across the listed areas in both states.

"Residential electrician services require attention to code requirements and system safety in every home," said Adam Dietrich, President of Ferrell Electric. "The team focuses on completing installations and repairs according to established standards."

The company operates as a locally owned and operated business. It has accumulated more than 33 years of work history in the region. Electricians treat each service call with care and respect. All personnel hold the necessary qualifications for the tasks performed, and the company maintains licensed status under License Number EN213209.

"Over the years, the company has addressed a range of residential electrical needs in the communities it serves across Georgia and South Carolina," continued Dietrich. "This includes both new construction projects and maintenance on existing systems."

Ferrell Electric also manages commercial electrical work, although residential projects form a regular part of its operations. The same code-compliance standards apply across all job types. Panel upgrades address capacity needs in older homes by evaluating and replacing equipment as required. Lighting and fixture work includes coordination for proper function. Generator installations provide options for backup power during service interruptions.

The company follows procedures that include upfront pricing estimates before work begins. This applies to residential electrician services involving wiring, upgrades, and installations. Every job receives a review for adherence to applicable building codes and NEC standards. Permits are handled by state-licensed electricians to support full compliance in Georgia and South Carolina.

Ferrell Electric continues to perform residential electrical work in its established service areas. The focus remains on following procedures that support code-compliant outcomes in homes and other properties. This

approach has been in place since the company started in 1992 and covers the full spectrum of residential needs from initial system installation to ongoing repairs.

Established in 1992, Ferrell Electric is a locally owned electrical company based in Martinez, Georgia. It provides licensed commercial and residential electrical services to homes, businesses, and industrial sites. With over three decades of experience, the company focuses on expertise, safety, and quality craftsmanship while serving multiple communities in Georgia and South Carolina.
